

Contents

Contents	vii
Nomenclature	xi
1 Standard model and anomalous Triple Gauge Couplings	4
1.1 Standard model of particle physics	5
1.1.1 Electroweak interaction and the Brout-Englert-Higgs mechanism . . .	5
1.1.2 Standard model shortcomings	10
1.2 Z boson pair-production at the LHC	10
1.2.1 Lowest-order contribution to the ZZ production cross section	11
1.2.2 The factorization theorem and the hard process	11
1.2.3 PDFs	12
1.2.4 Higher-order corrections	13
1.3 Anomalous Triple Gauge Couplings	17
1.4 Previous limits on aTGCs	19
2 The Large Hadron Collider and the CMS detector	21
2.1 Large Hadron Collider	21
2.1.1 Overview	21
2.1.2 Luminosity and center-of-mass energy	22
2.1.3 Main experiments at the LHC	23
2.2 The CMS detector	24
2.2.1 The coordinate system	25
2.2.2 The magnet	26
2.2.3 The tracker	26
2.2.3.1 The pixel detector	27
2.2.3.2 The strip detector	27
2.2.3.3 Tracker performances	28

CONTENTS

2.2.4	The electromagnetic calorimeter	28
2.2.4.1	The barrel	31
2.2.4.2	The endcaps	32
2.2.4.3	The preshower	32
2.2.4.4	Performance	33
2.2.4.5	ECAL calibration strategy	33
2.2.5	The hadronic calorimeter	35
2.2.5.1	The barrel and the endcaps	37
2.2.5.2	The forward region	37
2.2.5.3	Performance	37
2.2.6	The muon chamber	38
2.2.6.1	Drift tube chambers	39
2.2.6.2	Cathode strip chambers	40
2.2.6.3	Resistive plate chamber system	40
2.2.6.4	Performance	41
2.2.7	The Trigger	42
2.2.7.1	Level 1 trigger	43
2.2.7.2	High level trigger	43
3	Measurement of the Z boson pair production cross section	45
3.1	The $2l2\nu$ final state and the analysis strategy	45
3.2	Simulation tools	47
3.2.1	MCFM	48
3.2.2	Detector simulation	49
3.3	Dataset, simulation and trigger	49
3.3.1	Dataset	49
3.3.2	Simulated samples	49
3.3.3	Trigger	52
3.4	Object reconstruction and selection	54
3.4.1	Primary vertex	54
3.4.2	Muon identification	55
3.4.3	Electron identification	57
3.4.4	Z candidate selection	59
3.4.5	Jets and missing energy	60
3.4.6	B quark tagging	62
3.5	Monte Carlo corrections	64

CONTENTS

3.6	Reduced missing transverse energy	65
3.6.1	Definition	65
3.6.2	Stability	66
3.7	Selection optimization	69
3.8	Background estimation	79
3.8.1	Drell-Yan background	79
3.8.2	Non-Resonant background: WW and top	89
3.8.3	Control sample for top backgrounds	90
3.8.4	Control sample for WW background	91
3.8.5	Control sample for WZ background	91
3.9	Systematic uncertainties	95
3.9.1	Monte Carlo and control sample statistics	95
3.9.2	ZZ and WZ cross sections: PDF's and QCD scales	96
3.9.3	Acceptance	99
3.9.4	Luminosity	99
3.9.5	Trigger and lepton identification and isolation efficiencies	100
3.9.6	Lepton momentum scale	100
3.9.7	Jet Energy Scale and Resolution	101
3.9.8	Missing transverse energy	102
3.9.9	B-Jet veto	102
3.9.10	Pileup	104
3.9.11	Drell-Yan background	104
3.9.12	Non-resonant backgrounds	105
3.9.13	Summary	105
3.10	Cross section measurement	107
3.10.1	Profile likelihood method	107
3.10.2	Results	109
3.10.3	Discussion	110
4	Search for anomalous triple gauge couplings	113
4.1	Limit setting	113
4.2	Combined limits from the $ZZ \rightarrow 4l$ and $ZZ \rightarrow 2l2\nu$ channels	121
4.3	Discussion	122
5	Timing studies for the phase 2 upgrade	123
5.1	The High Luminosity LHC	123

CONTENTS

5.2	ECAL shower timing studies	126
5.3	Reconstruction performance using timing	135
5.3.1	Vertex reconstruction	136
5.3.2	Removal of pileup jets	139
5.3.3	Occupancy reduction through time selection	141
5.3.4	H boson mass resolution in the $H \rightarrow \gamma\gamma$ channel	142
5.4	Results and discussion	147
6	Conclusions	148
	List of Figures	150
	List of Tables	159
	References	161
