

Table of contents

1	Introduction	1
2	Quantisation of the Laplacian	7
2.1	Introduction	7
2.2	The moment map picture	9
2.2.1	The infinite dimensional picture	10
2.2.2	The finite dimensional picture	12
2.3	Some preliminaries	14
2.3.1	A quick review of the Fubini–Study geometry of Grassmannians . .	14
2.3.2	Asymptotic expansions of Bergman kernels and Toeplitz operators .	15
2.3.3	The Hilb_k and the FS_k maps	19
2.3.4	The Lichnerowicz operator	20
2.4	Asymptotics of $P_k^*P_k$	20
2.5	Eigenvalues and Eigenspaces	27
2.5.1	Initial step of the induction	29
2.5.2	Upper bound on the eigenvalues	29
2.5.3	Some estimates	31
2.5.4	Lower bound for the eigenvalues	33
2.5.5	Completing the proof of the induction, steps 2 and 3	43
2.6	Applications	46
2.6.1	Quantisation of the Laplacian for balanced metrics	46
2.6.2	Spectral measures	49
2.7	Explicit calculations for $\mathbb{C}P^1$	50
3	Quantising Solutions to the Heat Equation	57
3.1	Introduction	57
3.2	Relation with other work	59
3.3	Proof of the results	60

3.3.1	Proof of Proposition 3.3.3	61
4	Geometric Quantisation and the Derivative of Hilb_k	75
4.1	Introduction	75
4.2	The geometric structures on \mathcal{H} and \mathcal{B}_k	77
4.3	The derivatives of Hilb_k and FS_k	78
4.4	Relation between geometric quantisation and the Hilb_k -map.	80
4.5	Relation between Berezin quantisation and the FS_k -map	82
4.6	The Hessian of Hilb_k	84
4.6.1	Application	85
4.6.2	Proof of theorem 4.6.2	87
