I	Introduction	1
II	State of the art	6
1	Diffusion in porous materials	7
1.1	Porous materials properties	7
1.2	Macroscopic Diffusion	9
1.3	Microscopic Diffusion	16
1.4	Reactive transport	18
1.5	Homogenization schemes	20
1.6	Challenges for transport simulation	30
2	Cementitious materials	31
2.1	General overview	31
2.2	Cement hydration and microstructure formation	32
2.3	Stability	42
2.4	Reactive transport on cementitious materials	48
2.5	Homogenization of cementitious materials	50
3	Description of the methodology	53
III	Experimental approach	55
1	Introduction and objectives	55
2	Materials and methods	57
2.1	Materials	57
2.2	Methods	59
3	Experimental results	65
3.1	Through diffusion tests	65
3.2	C ₃ S paste analysis	68
4	Conclusion of the experimental part	79
IV	Numerical approach	80

1	Introduction, objectives and methods	81
2	Algorithms	81
2.1	Numerical Microstructures Generation	81
2.2	Transport algorithms	85
3	Model of the sound material	91
3.1	Generating a microstructure of a cement paste	91
3.2	Representative Elementary Volume	92
4	Degradation of the sound material	98
4.1	REV degradation	99
4.2	Dynamic degradation modelling	107
5	Conclusions of the numerical approach	116
V	Modelling approach	118
1	Introduction and objectives	118
2	Statistical homogenization of diffusion	119
2.1	Hypotheses	119
2.2	Relevant diffusion parameters	119
2.3	Diffusion description	121
3	Conclusions of the modelling approach	126
VI	Coupling the approaches	128
1	Introduction	128
2	Algorithm	128
2.1	Description	128
2.2	Chemistry update	129
2.3	Feedback relationships	130
3	Results	130
3.1	Results for leaching	130
3.2	Results for carbonation	133

VII	Conclusions and perspectives	137
	References	140
VIII	Appendix	152
