Part 1. Cohomology and Hodge theory on hypercomplex manifolds 1

Chapter 1. Introduction 3
1.1. From complex to hypercomplex manifolds 3
1.2. From complex surfaces to $SL(2,\mathbb{H})$-manifolds 6
1.3. Examples of hypercomplex manifolds 9

Chapter 2. Hodge theory 13
2.1. A double complex on complex manifolds 13
2.2. A single complex on hypercomplex manifolds 14
2.3. Hodge theory on compact complex manifolds 17
2.4. Hodge theory on compact hypercomplex manifolds 19

Chapter 3. Cohomological properties of hypercomplex manifolds 25
3.1. Conjugation symmetry 25
3.2. A quaternionic $\partial\overline{\partial}$-Lemma 26
3.3. A quaternionic Frölicher spectral sequence 28
3.4. A quaternionic Frölicher-type inequality 31

Chapter 4. $SL(2,\mathbb{H})$-manifolds versus complex surfaces 33
4.1. $SL(n,\mathbb{H})$-manifolds 34
4.2. Serre duality and $SL(n,\mathbb{H})$-symmetry 35
4.3. Pure-and-full hypercomplex structures 36
4.4. Frölicher degeneracy on $SL(2,\mathbb{H})$-manifolds 39
4.5. Non-HKT-ness degrees 40
4.6. Quaternionic strongly Gauduchon metrics 42

Chapter 5. Computations 45
5.1. Hypercomplex nilmanifolds 45
5.2. Example 1 48
5.3. Example 2 50
5.4. Example 3 51

References 53

Part 2. Seiberg–Witten equations on Riemannian foliations 57

Chapter 6. Introduction 59
6.1. Seiberg–Witten equations 59
6.2. Riemannian foliations 63
6.3. Seiberg–Witten equations on Riemannian foliations 65
6.4. Applications 69

Chapter 7. Transverse geometry 71
7.1. Riemannian foliations 71
7.2. The transverse Levi-Civita connection 73
7.3. Basic cohomology groups 75
7.4. The mean curvature form 77
7.5. Twisted connections and differentials 81

Chapter 8. Dirac operators on foliated bundles 85
8.1. Basic Dirac bundles 85
8.2. Basic Dirac operators 89
8.3. A Schrödinger–Lichnerowicz formula 91

Chapter 9. Sobolev spaces 95
9.1. Sobolev norms for foliated bundles 95
9.2. Sobolev embedding, Sobolev multiplication and Rellich 96
9.3. Regularity for transversally elliptic operators 97

Chapter 10. Basic Seiberg–Witten equations 99
10.1. Setting up the equations 99
10.2. The basic gauge group 101
10.3. Transversality 103

Chapter 11. Compactness of the moduli space 107
11.1. Pointwise estimates of ψ and F_A^+ 107
11.2. Basic gauge fixing 109
11.3. The lattice condition 111
11.4. The bootstrapping procedure 112
11.5. Compactness 114

Chapter 12. Basic Seiberg–Witten invariants 115
12.1. Definition of the invariants 115
12.2. Transverse almost Kähler structures 116
12.3. K-contact and Sasakian 5-manifolds 120
