Introduction	ix
1 Household Decisions on Arts Consumption	1
1.1 Introduction	1
1.2 Review of the Literature	2
1.2.1 Demand for the Arts	2
1.2.2 Collective Models	5
1.3 Data and methodology	7
1.3.1 Data	7
1.3.2 Methodology	11
1.4 Results and Analysis	14
1.5 Conclusion	18
2 Overcoming Weak Identification	19
2.1 Introduction	19
2.2 Theoretical Framework	24
2.2.1 The collective model and resource shares	24
2.2.2 Trade-off potential in DLP: resource shares versus tastes	28
2.2.3 The implications: trade-offs in a simulation study	30
2.3 Estimation Strategy	33
2.3.1 Stabilization of mean resource shares	33
2.3.2 Choosing the shrinkage parameter λ	36
2.3.3 Covariance Restriction	37
2.3.4 Asymptotic Behavior	39
2.3.5 Performance in simulations	39
2.4 Application using PROGRESA data	41
2.4.1 Program design	42
2.4.2 Sample selection and descriptive statistics	43
2.4.3 Parameter estimates	45

2.4.4	Handling endogeneity	46
2.4.5	Welfare effects of PROGRESA	48
2.5	Conclusion	50
A1	Application	54
A2	Three-member version	57
3	Bayesian Collective Demand	59
3.1	Introduction	59
3.2	The Model	62
3.2.1	Theoretical Model	62
3.2.2	Empirical specification	65
3.3	Data	67
3.3.1	Without children	67
3.3.2	Little children	69
3.4	Prior Information	70
3.4.1	Prior on the scale economies	70
3.4.2	Priors on covariances	72
3.5	Estimation	73
3.5.1	Sampling Method	74
3.5.2	Model Behavior	76
3.5.3	Results	77
3.5.4	Analysis	81
3.6	Conclusion	82
	Conclusion	83
