Abstract	i
Samenvatting	ii
Résumé	iii
Acknowledgements	iv
List of publications	v
Introduction	vi
1 Aspects of the AdS/CFT correspondence	2
1.1 Anti-de Sitter space and black hole solutions	2
1.2 Conformal field theory	5
1.3 Obtaining the duality from string theory	7
1.3.1 String theory	7
1.3.2 D-branes	8
1.3.3 Relation to supergravity	9
1.3.4 Obtaining the correspondence	9
1.4 The dictionary and holographic renormalization	10
1.4.1 The stress-energy tensor	12
1.4.2 Example: Massless scalar field	13
1.5 Confining holographic models	15
1.5.1 Confinement in field theory	15
1.5.2 Confinement in holography	15
1.6 Dynamics and holographic thermalization	19
1.6.1 Quasinormal modes of black holes	19
1.6.2 Numerical treatment	20
1.6.3 Weak field black hole formation	23
1.6.4 AdS Vaidya spacetimes	30
1.6.5 Dynamics in global AdS	32
2 Holographic thermalization in confining theories	33
2.1 Introduction and motivation	33
2.2 The hard wall model	35
2.2.1 Holographic setup	35
2.2.2 Boundary expansion and holographic renormalization	35
2.2.3 Numerical methods	38
2.2.4 The black hole phase and the scattering phase	38
2.2.5 Weak field solution in the scattering phase	40
2.2.6 The phase diagram	41
2.2.7 Late time behaviour	42
2.2.8 Weakly non-linear perturbation theory	43
2.2.9 Summary	45
2.3 The AdS Soliton model	46

2.3.1	Holographic setup	46
2.3.2	Boundary expansion and holographic renormalization	48
2.3.3	Numerical methods	50
2.3.4	Phase diagram	52
2.3.5	Black hole phase	53
2.3.6	Scattering phase	54
2.3.7	Summary	67
2.4	Conclusions and outlook	68
3	Collisions of pointlike particles in three-dimensional gravity	70
3.1	Three-dimensional anti-de Sitter space	70
3.1.1	Geodesics	71
3.2	Non-rotating pointlike particles in anti-de Sitter space	72
3.2.1	Moving particles	72
3.2.2	Holonomy	75
3.2.3	The stress-energy tensor	75
3.2.4	The massless limit	76
3.3	The non-rotating BTZ black hole	76
3.4	Collision of two particles	81
3.4.1	Collision of massive particles in the center of momentum frame	83
3.4.2	Collision of massless particles in the center of momentum frame	85
3.4.3	A comment on symmetric wedges	85
3.5	Collisions of many particles	86
3.5.1	Massless particles	86
3.5.2	Massive particles	97
3.5.3	The event horizon	111
3.5.4	Numerical algorithm for constructing the solutions	111
3.6	Thin shells and the junction formalism	112
3.6.1	Massless shells	113
3.6.2	Massive shells	116
3.6.3	The stress-energy tensor of the dual CFT	121
3.7	Conclusions and outlook	124
4	Black holes in higher spin gravity	126
4.1	Three-dimensional gravity and its Chern-Simons formulation	128
4.1.1	Boundary conditions and asymptotic symmetry algebra	130
4.1.2	Anti-de Sitter space in the Chern-Simons formulation	131
4.1.3	Relation with AdS_3 as the group manifold $SL(2, \mathbb{R})$	132
4.1.4	Identification of points in AdS	133
4.1.5	Summary	137
4.2	Gravity coupled to a $U(1)$ charge	138
4.2.1	Collisions of charged particles	139
4.3	Higher spin gravity in three dimensions	140
4.3.1	Boundary conditions and asymptotic symmetries	141
4.3.2	Higher spin black holes	141
4.4	Higher spin gravity solutions by identifying points in $SL(3, \mathbb{R})$	143
4.4.1	The general prescription	143
4.4.2	Some further comments	148
4.4.3	Summary	156
4.5	Conclusions and outlook	157
5	Conclusions	158

A	Computations related to Chapter 3	160
A.1	Shape of boosted wedges	160
A.2	Equations relating to collisions of massless particles	160
A.2.1	Derivation of equation (3.69)	160
A.2.2	Some more derivations	162
A.2.3	The stress-energy tensor for the shell	163
A.3	Equations relating to collisions of massive particles	164
A.3.1	Derivation of equation (3.120)	164
A.3.2	Derivation of equations (3.135) and (3.161)	165
A.3.3	Derivation of equations (3.139) and (3.165)	165
A.3.4	Derivation of the induced metric	166
A.3.5	Consistency condition on the induced metric	168
A.3.6	The stress-energy tensor for the shell	169
B	Computations related to Chapter 4	171
B.1	Classification of solutions for gravity	171
B.1.1	Relations between $SO(2, 2)$ and $SL(2, \mathbb{R}) \times SL(2, \mathbb{R})$	171
B.1.2	One-parameter subgroups in $SL(2, \mathbb{R}) \times SL(2, \mathbb{R})$	172
B.2	Classification of solutions for $SL(3, \mathbb{R}) \times SL(3, \mathbb{R})$ higher spin gravity	175
B.3	Comments on permutation of eigenvalues of A_ϕ	177
B.4	Relations with previous conventions	177
