Résumé	3
Abstract.....	4
Remerciements	5
List of abbreviations	10
Objectives and outline	11
1 GENERAL INTRODUCTION	14
1.1 Motivation.....	14
1.2 The cryosphere and the climate	14
1.2.1 Description of the cryosphere	14
1.2.2 How is Antarctic ice affected by climate change?.....	17
1.2.3 Climate-cryosphere feedbacks in Antarctica	18
1.3 Contribution of Antarctica to sea level rise	21
1.3.1 Global relative contribution to sea level rise	21
1.3.2 Methods for estimating the contribution of Antarctica to sea level rise	22
1.3.3 Mass balance of coastal Antarctica.....	22
1.4 The IceCon project : Constraining ice mass changes in Antarctica	26
1.5 The climate record of Antarctic ice rises	27
1.5.1 Ice core record (centennial to millennial scale)	27
1.5.2 Englacial stratigraphy (millennial scale).....	30
1.6 Specific properties of Antarctic ice shelves	31
1.6.1 Subglacial channels (a contribution to basal mass balance)	32
1.6.2 Melt ponds (a contribution to surface mass balance)	33
2 METHODS.....	35
2.1 Main study site and ice core drilling within the IceCon project	35
2.2 Physical measurements	37
2.2.1 Density.....	37
2.2.2 Vertical movement	39
2.2.3 Submergence velocity and strain rate determination	43
2.3 Chemical analyses.....	43
2.3.1 Water stable isotopic composition	44

2.3.2	Ion chromatography	45
2.3.3	Electric Conductivity Measurements	46
3	RESULTS AND DISCUSSION	47
3.1	Ice shelf density reconstructed from optical televiewer borehole logging: <i>Determining the density profile of the ice core</i>	47
3.1.1	Introduction.....	47
3.1.2	Field site and methods.....	49
3.1.3	OPTV luminosity and core density	50
3.1.4	Summary and discussion	55
3.1.5	Acknowledgements	55
3.1.6	References	55
3.2	Ice core evidence for a 20th century increase in surface mass balance in coastal Dronning Maud Land, East Antarctica: <i>Dating the ice core and reconstructing past accumulation rates</i>	57
3.2.1	Introduction.....	58
3.2.2	Field site and methods.....	59
3.2.3	Results	64
3.2.4	Discussion.....	72
3.2.5	Conclusions.....	75
3.2.6	Data Availability.....	75
3.2.7	Acknowledgements	76
3.2.8	References	76
3.3	A new method using repeated OPTV records to reconstruct “in-situ” submergence velocities and vertical strain rates of firn and ice at Derwael ice rise and related applications	83
3.3.1	High-resolution vertical velocity and strain rates reconstructed from optical televiewer-based layer differencing: Derwael ice rise, East Antarctica	83
3.3.2	Implications for SMB corrections.....	96
3.3.3	Independent check on the age-depth profile and preliminary implications for the steady-state hypothesis	99
4	CONTRIBUTION TO OTHER STUDIES.....	101
4.1	Surface Mass Balance of Antarctic ice rises	101
4.1.1	Temporally stable surface mass balance asymmetry across an ice rise derived from radar internal reflection horizons through inverse modeling	101
4.1.2	High variability of climate and surface mass balance induced by Antarctic ice rises	105

4.2	Specific features of Antarctic ice shelves.....	107
4.2.1	Constraining variable density of ice shelves using wide-angle radar measurements	109
4.2.2	Massive subsurface ice formed by refreezing of ice-shelf melt ponds	112
4.3	IceCon : Constraining ice mass changes in Antarctica	114
4.4	Ice core evidence of SMB dissymmetry around ice rises: preliminary results	115
5	GENERAL CONCLUSION	118
5.1	Synthesis of the findings.....	118
5.2	Perspectives for future work	119
5.2.1	Additional ice core drilling and analyses.....	119
5.2.2	Optical televiewer method	120
5.2.3	Implications for regional and large scale climate.....	120
