

# Contents

<b>Nomenclature</b>	<b>xxi</b>
<b>1. Introduction</b>	<b>1</b>
1.1. Challenges for future space missions . . . . .	1
1.2. State of the art on physico-chemical modeling and reduction techniques . . . . .	3
1.3. Objectives of this thesis . . . . .	8
1.4. Manuscript Structure . . . . .	9
1.5. Publications . . . . .	10
<b>2. Physico-chemical modeling of non-equilibrium plasma</b>	<b>13</b>
2.1. Governing equations . . . . .	13
2.2. Thermodynamic and transport properties . . . . .	15
2.2.1. Kinetic mechanisms . . . . .	15
2.2.2. Multi-Temperature thermodynamic properties . . . . .	18
2.2.3. State-to-state thermodynamic properties . . . . .	22
2.2.4. Multi-Temperature transport properties . . . . .	24
2.3. Chemical production and energy transfer . . . . .	26
2.3.1. Chemical mechanisms . . . . .	26
2.3.2. Rate coefficients . . . . .	30
2.3.3. Energy/chemistry exchange . . . . .	33
<b>3. Numerical calculation of normal shock waves</b>	<b>35</b>
3.1. The Ordinary Differential Equations solver . . . . .	35
3.2. Detailing the shock structure . . . . .	38
3.3. Validation with UTIAS shock tube experiments . . . . .	41
3.4. Influence of free-stream conditions . . . . .	42
3.4.1. Pressure . . . . .	42
3.4.2. Speed . . . . .	44
3.5. Study of the electronically excited levels . . . . .	44
3.5.1. Population distribution . . . . .	44
3.5.2. Boltzmann excitation temperatures . . . . .	45
3.6. Radiative properties . . . . .	46
3.7. Influence of the various processes . . . . .	46
3.7.1. Influence of the excitation and ionization reactions . .	46
3.8. Thermodynamic energy transfer compared to chemistry . .	50
3.9. Study of the entropy . . . . .	52
3.9.1. Entropy . . . . .	52

3.9.2. Entropy production . . . . .	54
3.9.3. Degree of disequilibrium . . . . .	55
3.10. Normal shock waves in nitrogen . . . . .	62
3.11. Conclusions on the dynamical study of normal shock waves . . . . .	64
<b>4. A derived coarse grain model for argon</b>	<b>65</b>
4.1. A modified reactive scheme . . . . .	65
4.2. Governing equations in the shock frame . . . . .	69
4.3. Entropy verification . . . . .	73
4.3.1. Deriving the entropy production . . . . .	73
4.3.2. Proof of the second law . . . . .	77
4.4. Implementation of the model in the shock relaxation code . . . . .	79
4.5. Conclusions on the novel coarse grain model for argon . . . . .	79
<b>5. Principal Component Analysis</b>	<b>81</b>
5.1. Mathematical formulation and definition of PCA . . . . .	81
5.2. Score-PCA . . . . .	84
5.3. Manifold Generated Principal Component Analysis (MG-PCA) . . . . .	85
5.3.1. Local MG-PCA . . . . .	86
5.4. Pre-processing of the sample PCA data . . . . .	87
5.4.1. Outlier detection and removal . . . . .	87
5.4.2. Centering and scaling . . . . .	88
5.5. Choosing a subset of principal variables . . . . .	89
5.6. Rotation of principal components . . . . .	90
5.7. Numerical implementation of PCA for CFD . . . . .	91
<b>6. Principal component analysis on a collisional-radiative argon model</b>	<b>95</b>
6.1. Manifold Generated Principal component analysis . . . . .	95
6.1.1. Pre-processing : centering and scaling . . . . .	96
6.1.2. System reduction and principal variable extraction . . . . .	96
6.1.3. A posteriori model evaluation . . . . .	97
6.2. Local MG-PCA . . . . .	103
6.2.1. Pre-processing: centering and scaling . . . . .	104
6.2.2. Clustering algorithm for local MG-PCA . . . . .	104
6.2.3. A posteriori model evaluation . . . . .	105
6.3. Score principal component analysis . . . . .	108
6.3.1. A posteriori model evaluation . . . . .	108
6.4. Conclusions on the reduction of the argon CR model . . . . .	117
<b>7. Reduction of the N<sub>2</sub>-N mechanism</b>	<b>121</b>
7.1. State of the art . . . . .	121
7.2. Vibrational collisional model . . . . .	122
7.2.1. Reduction of the VC model . . . . .	123
7.3. Binning models . . . . .	127
7.3.1. The BRVC model . . . . .	127

7.3.2. Reduction of the BRVC model . . . . .	129
7.3.3. The URVC model . . . . .	130
7.3.4. Reduction of the URVC model . . . . .	133
7.4. Conclusions on the reduction of the N-N <sub>2</sub> model . . . . .	138
<b>8. Conclusion</b>	<b>141</b>
8.1. Conclusions . . . . .	141
8.2. Suggestions for future work . . . . .	143
<b>Appendices</b>	<b>145</b>
<b>A. Coefficients for transport properties</b>	<b>147</b>
<b>B. Degree of disequilibrium classification</b>	<b>149</b>
<b>Bibliography</b>	<b>159</b>
