Abstract	iii
Acknowledgements	v
Contents	vii
List of Figures	xiii
List of Tables	xix
List of Abbreviations	xxiii
Introduction	1
I Theory	7
1 Travelling waves	11
1.1 Overview	12
1.2 Transmission lines	13
1.2.1 Lumped element models	13
1.2.2 Distributed parameter models	14
1.2.3 Modal analysis	15
1.2.4 Line parameters	16
1.2.5 Non homogeneous lines	18
1.3 Transmission line equations	18
1.3.1 Time domain	18
1.3.2 Frequency domain	19
1.4 The lossless line	21
1.4.1 Propagation speed	22
1.4.2 Characteristic impedance	23
1.4.3 General solution	23
1.5 Reflections	24

1.5.1	Reflections on line junctions	24
1.5.2	Reflections on line terminations	26
1.5.3	Lattice diagram	27
1.6	Attenuation and distortion	28
1.7	The impact of substation measurement	29
1.7.1	Transformers bandwidth	29
1.7.2	Secondary cable ringing	30
2	Simulation tools	33
2.1	Power system model	34
2.1.1	Overhead lines	34
2.1.2	Measurement transformers	35
2.1.3	Neglected effects	36
2.2	Illustration of TWs properties	37
2.2.1	Wave propagation and reflection	37
2.2.2	Attenuation and distortion	40
2.2.3	Typical propagation speed in overhead lines	40
2.3	Discussion	41
3	Algorithms based on travelling waves	43
3.1	Fault location algorithms	44
3.1.1	Passive two-ended (Type D)	44
3.1.2	Passive single-end (Type A)	45
3.1.3	Active single end (Type E)	46
3.2	Non homogeneous lines	47
3.2.1	Updated type-D algorithm	48
3.2.2	Example	49
3.3	Practical considerations	50
3.3.1	Technical requirements	50
3.3.2	Propagation speed	51
3.3.3	Measurement transducers	51
3.3.4	Signal processing	52
3.3.5	In this project	52
4	Travelling wave fault location based on Pattern recognition	55
4.1	Theoretical development	56
4.1.1	Starting equations	57
4.1.2	Building the signals	58
4.1.3	Pattern recognition	59

4.2	Basic principle illustration	60
4.3	Practical challenges and solutions	61
4.3.1	Big data transfer - $S_{Reduced}$	62
4.3.2	Unreliable voltages - S_I	62
4.3.3	Attenuation and reflections - Correction factor	63
4.3.4	Secondary cable ringing - notch filter	63
4.3.5	Line parameters knowledge	65
4.3.6	Distortion	65
4.4	Algorithm description	66
4.4.1	Pre-computations	66
4.4.2	Define the value of the parameters	66
4.4.3	Apply the pattern recognition algorithm	67
4.5	Discussion	67
II Results		69
5	Substation measurements	73
5.1	Lightning impulse	74
5.1.1	Definition	74
5.1.2	Single stage generator circuit	75
5.1.3	Multi-stage generator circuit	77
5.1.4	Current impulse	78
5.2	Test set-up	78
5.2.1	Lightning current impulse generator	79
5.2.2	Equipment description	80
5.3	Test results	81
5.3.1	Records	81
5.3.2	CT transfer function	83
5.4	Notch filter	84
5.4.1	Notch filter design	85
5.4.2	Results	85
5.5	Discussion	86
6	Measurement campaign	89
6.1	Measurement campaign description	91
6.1.1	Monitored line	91
6.1.2	Measurement systems	92
6.1.3	Useful records acquired	94

6.2	Records	95
6.2.1	Event 1: Line energizing of substation A	95
6.2.2	Event 2: Line energizing of substation B	96
6.2.3	Event 3: Single phase to ground fault (2-ended)	97
6.2.4	Event 4: Single phase to ground fault (1-ended)	99
6.3	Propagation speed	100
6.4	Fault record analysis	101
6.4.1	Impact of the voltage transformers	101
6.4.2	Reflections on the T-junction	103
6.4.3	Reflections on the CT secondary cabling	103
6.4.4	Fault location	103
6.4.5	Notch filter	106
6.5	Discussion	109
7	Simulation models	111
7.1	Current measurement system	112
7.1.1	EMTP model	113
7.1.2	Parameters sensitivity	114
7.1.3	Discussion	116
7.2	Power system	116
7.2.1	Model	116
7.2.2	Results	118
7.3	Case studies	119
7.3.1	Effect of topology - Bergeron models	119
7.3.2	Effect of wave properties - No outside reflections	120
7.3.3	Complete overhead lines	121
7.4	Discussion	123
8	Pattern recognition algorithm	125
8.1	Algorithm parameters	126
8.1.1	Impact of using S_I	127
8.1.2	Impact of the correlation window	130
8.1.3	Impact of the measurement system and notch filter	133
8.1.4	Discussion	134
8.2	Algorithm performance	136
8.2.1	Complete simulation models	136
8.2.2	Application to the fault record	137
8.3	Discussion	138

Conclusion	141
A List of reports and publications	145
B Simulation models	147
C Measurement tools	153
D Measurement campaign and lab tests	159
D.1 Measurement campaign description	159
D.2 HV laboratory tests	164
Bibliography	167
