Abstract	ix
Résumé	xi
List of publications	xiii
1 Introduction, motivation and scope	1
I BASICS OF QUANTUM INFORMATION IN PHASE SPACE	7
2 Quantum optics in phase space	9
2.1 Quantization of the electromagnetic field	9
2.2 Wigner function	11
2.3 Gaussian states	15
2.4 Gaussian unitaries	17
2.4.1 Symplectic transformations	17
2.5 Examples of Gaussian unitaries and Gaussian states	20
2.5.1 Coherent states and displacement operator	20
2.5.2 Squeezed states and squeezing operator	21
2.5.3 Phase-shift operator	23
2.5.4 Beam splitter	23
2.5.5 Two-mode squeezer	24
2.5.6 Thermal states	25
2.6 Passive states	26
3 Shannon information theory	27
3.1 Discrete variables	27
3.1.1 Shannon entropy	27
3.1.2 Joint entropy	28
3.1.3 Relative entropy	28
3.1.4 Mutual information	29
3.2 Continuous variables	29
3.2.1 Shannon differential entropy	29

3.2.2	Joint entropy, relative entropy, mutual information and properties	30
3.2.3	Entropy of Gaussian distributions	31
3.2.4	Entropy power	32
3.2.5	Rényi entropy	32
3.2.6	Wehrl entropy	33
4	Uncertainty relations	35
4.1	Variance-based uncertainty relations	35
4.1.1	Heisenberg uncertainty relation	35
4.1.2	Robertson-Schrödinger uncertainty relation	37
4.1.3	Proof of the Robertson-Schrödinger uncertainty relation	40
4.1.4	Gaussianity-bounded uncertainty relation	41
4.1.5	Purity-bounded uncertainty relation	44
4.2	Entropy-based uncertainty relations	45
4.2.1	Continuous-variable entropic uncertainty relations	45
4.2.2	Proof of the original entropic uncertainty relation	47
4.2.3	Discrete-variable entropic uncertainty relations	48
5	Separability criteria	51
5.1	Entangled states	52
5.2	Discrete-variable separability criteria	53
5.3	Continuous-variable separability criteria	54
5.3.1	Variance-based separability criterion	54
5.3.2	Entropy-based separability criterion	59
5.3.3	Other separability criteria	60
II	CONTINUOUS-VARIABLE UNCERTAINTY RELATIONS	61
6	Tight entropic uncertainty relation for canonically conjugate variables	63
6.1	Entropy-power uncertainty relations	64
6.2	Extended forms of entropic uncertainty relations	65
6.2.1	Motivation	65
6.2.2	Tight uncertainty relation saturated by all pure Gaussian states	66
6.2.3	Numerical evidence of relation (6.14)	68
6.3	Conditional proof of relation (6.14)	70
6.3.1	Special case of Gaussian states	70
6.3.2	General case	71
6.4	Generalization to n modes	76
6.4.1	Conditional proof of the n -mode generalization	79
6.5	Attempts towards a full proof	82
6.6	Conclusion	85

7	Entropic uncertainty relations for arbitrary quadratures	87
7.1	Linear canonical transforms	88
7.2	Multidimensional uncertainty relations	91
7.2.1	Entropic uncertainty relation between two linear canonical trans- forms	91
7.2.2	Entropic uncertainty relation based on a commutators matrix	94
7.2.3	Extension to Rényi entropies	98
7.2.4	Corresponding covariance-based uncertainty relation	99
7.3	Conclusion	100
8	Tight entropic uncertainty relation for arbitrary quadratures	103
8.1	A general entropic uncertainty relation saturated by all pure Gaussian states	105
8.2	Explicit entropy calculation for Gaussian states	106
8.3	Other formulations	110
8.4	Conditional proof of Eq. (8.11)	111
8.5	Attempt to define a purity-bounded entropic uncertainty relation	114
8.6	Corresponding covariance-based uncertainty relation	115
8.7	Conclusion and perspectives	117
9	Wigner Entropy	119
9.1	A conjecture for positive Wigner functions	119
9.2	Numerical evidences	122
9.3	A complex-valued Wigner entropy	123
9.3.1	Definition	123
9.3.2	Properties of the complex Wigner entropy	124
9.3.3	An entropic uncertainty relation?	126
10	Symplectic-invariant entropic uncertainty relation based on a multi-copy uncertainty observable	131
10.1	2-copy uncertainty observable \hat{L}_z	132
10.1.1	Definition of \hat{L}_z and link with the uncertainty relation	132
10.1.2	Physical realization	134
10.1.3	Ladder operators	136
10.1.4	Alternative definitions	139
10.1.5	Eigensystem of L_z	140
10.1.6	Symmetry property	142
10.1.7	Entropic uncertainty relation based on \hat{L}_z	143
10.1.8	Invariance of $H(\hat{L}_z)_\rho$	143
10.1.9	Special case of Gaussian states	144
10.1.10	Example of non-Gaussian states	146
10.2	3-copy uncertainty observable \hat{L}^*	148
10.2.1	Definition of \hat{L}^* and link with the uncertainty relation	148

10.2.2	Alternative definitions	151
10.2.3	Physical realization	152
10.2.4	Special case of Gaussian states	153
10.2.5	Case of non-Gaussian states	154
III	CONTINUOUS-VARIABLE SEPARABILITY CRITERIA	155
11	Improved continuous-variable separability criterion based on the degree of Gaussianity	157
11.1	Improved separability condition	158
11.2	Detection of non-Gaussian entangled states	162
11.2.1	Non-Gaussian states generated from Fock states or phase-diffused coherent states	162
11.2.2	Squeezed single-photon path-entangled state	169
11.3	Conclusion	170
12	Improved entropic separability criterion for non-Gaussian states	173
12.1	Derivation of the criterion	173
12.2	Example of an entangled mixed state	175
12.3	Discussion	177
13	Conclusion	179
	Bibliography	185
