

Table of Contents

Acknowledgements	v
Summary	x
List of Tables	xix
List of Figures	xx
Chapter 1. Introduction	1
1.1 Motivation	1
1.2 Scope of chapters	3
1.3 Ice sheets and glaciers	4
1.3.1 Surface mass balance	5
1.4 Ice as a climate archive	6
1.4.1 The Mid-Pleistocene Transition	6
1.4.2 The Beyond Epica Oldest Ice project in a nutshell	8
1.5 Characteristics of polythermal glaciers and ice sheets	10
1.5.1 Polythermal structure	11
Chapter 2. The thermodynamics and thermomechanics of ice	15
2.1 Thermal regimes	16
2.1.1 Thermal conduction and Fourier's law	16
2.1.2 Vertical advection	19
2.1.3 Dirichlet and Neumann boundary conditions	21
2.1.3.1 Surface temperature	23
2.1.3.2 Geothermal heat flux	24
2.1.4 Derived temperature profile	29
2.1.5 Three dimensional advection	30
2.2 The pressure melting point	31
2.3 Mechanical regimes	32
2.3.1 Stress	32

2.3.2 Strain	33
2.3.3 Frictional heating	33
2.4 Additional sources of heat: latent heat	35
2.5 Mechanical models	37
2.6 Thermomechanical ice-flow models	39
Chapter 3. The climate memory of an Arctic polythermal glacier	42
3.1 Introduction	42
3.2 Field data and radar analysis	43
3.3 Modelling englacial temperature change	48
3.4 Validity of the diffusion model	51
3.5 Reconstructing ELA trends	56
3.6 Discussion	59
3.7 Conclusions	60
3.8 Appendix: Model description	62
Chapter 4. Constraints on thermodynamical modelling of the Antarctic Ice sheet	65
4.1 The Antarctic Ice Sheet in a nutshell	66
4.1.1 Deep ice core sites	67
4.2 Antarctic Ice Sheet geometry	70
4.3 Surface ice velocity and ice flow	73
4.4 Mass balance	75
4.4.1 Surface air temperature	75
4.4.2 Surface mass balance	76
4.5 Geothermal heat flux	78
4.5.1 Overview	78
4.5.2 Current data sets	80
4.5.3 Greenland data	85
4.6 Subglacial lakes	86
4.7 Antarctic Ice Sheet reconstructions of the last 1.5 Ma	89
Chapter 5. Using ice-flow models to evaluate potential sites of million year-old ice in Antarctica	93
5.1 Introduction	95
5.2 Why obvious drill sites are unsuitable	97
5.3 Uncertainties in Antarctic GHF and the location of oldest ice	100

5.3.1	Data sets and model setup	100
5.3.2	Results	102
5.4	Thermomechanical ice-flow modelling	104
5.4.1	Model description	105
5.4.2	Velocity field	106
5.4.3	Input data calibration	108
5.4.4	Subglacial lake correction	109
5.5	Ensemble model results	110
5.6	Discussion and conclusions	112

Chapter 6. Promising Oldest Ice sites in East Antarctica based on thermodynamical modelling **117**

6.1	Introduction	119
6.2	Thermodynamical modelling	124
6.2.1	Steady-state model	124
6.2.2	Transient model description	125
6.2.3	Model forcing	126
6.2.4	Limit values of GHF	127
6.2.4.1	Constraints on GHF	128
6.2.5	Constraints on Oldest Ice candidate sites	129
6.3	Results	131
6.3.1	Large-scale GHF probability distributions	131
6.3.2	Small-scale GHF probabilities and Oldest Ice: Dome Fuji and Dome C	133
6.4	Discussion	138
6.4.1	Surface temperature forcing	138
6.4.2	Limits on G_{pmp} calculation	139
6.4.3	Steady-state model comparison	140
6.5	Conclusion and implications for Oldest Ice candidate sites	143
6.5.1	Dome Fuji	143
6.5.2	Dome C	144

Chapter 7. Discussion	145
7.1 Oldest Ice site developments	145
7.1.1 Dome C	145
7.1.2 Dome Fuji	150
7.1.3 Dome A	152
7.1.4 South Pole	154
7.1.5 Blue ice and debris glaciers	155
7.2 Oldest Ice constraints	156
Chapter 8. Conclusion and perspectives	157
8.1 General findings	157
8.2 Future work	159
References	162
