Introduction .....	1

I	<b>Tomorrow's distribution power grid</b>	
<b>1</b>	<b>New challenges for the power grid .....</b>	<b>11</b>
<b>1.1</b>	<b>The shift to renewable energy sources .....</b>	<b>13</b>
1.1.1	Increase of power imbalances .....	14
<b>1.2</b>	<b>Increase in amount and complexity of the consumption ...</b>	<b>15</b>
1.2.1	Demographic growth .....	15
1.2.2	The emergence of new electric loads .....	15

- 1.3 Specific challenges for the distribution grid . . . . . 18**
- 1.3.1 The need for storage and demand flexibility . . . . . 21
  
- 2 Definition of a framework . . . . . 23**
- 2.1 Demand-side management . . . . . 24**
- 2.1.1 Demand-side management programs . . . . . 25
- 2.1.2 The choice of a program . . . . . 25
- 2.2 Demand response . . . . . 27**
- 2.2.1 Demand response programs . . . . . 27
- 2.2.2 The choice of a program . . . . . 29
- 2.3 Dynamic pricings for residential customers . . . . . 31**
- 2.3.1 Time-of-use pricing . . . . . 32
- 2.3.2 Critical peak pricing . . . . . 33
- 2.3.3 Real-time pricing . . . . . 33
- 2.3.4 Prosumer pricing for customers producing electricity . . . . . 33
- 2.3.5 Inclining block rates . . . . . 35
- 2.3.6 Choosing a pricing structure . . . . . 35
- 2.4 The distribution grid in Belgium . . . . . 38**
- 2.4.1 Distribution system operators . . . . . 38
- 2.4.2 The current legal framework . . . . . 39
- 2.4.3 Pricing structures in Belgium . . . . . 40
- 2.4.4 Current load flexibility . . . . . 42
  
- 3 The smart grid to the rescue . . . . . 45**
- 3.1 The smart grid . . . . . 46**
- 3.2 ... and the smart meter . . . . . 46**
- 3.3 Towards a smart distribution grid in Belgium . . . . . 48**
- 3.3.1 The smart meter roll out . . . . . 48
- 3.3.2 Political incentives . . . . . 49
- 3.4 An attempt to an exhaustive state of the art . . . . . 49**
- 3.4.1 The potential of the residential area . . . . . 50
- 3.4.2 Optimization objectives for the future power grid . . . . . 51
- 3.5 Objectives and added-value of the current work . . . . . 54**

<b>4</b>	<b>Design of the residential area model</b>	<b>61</b>
<b>4.1</b>	<b>Distribution grid topology</b>	<b>62</b>
4.1.1	Thermal model of the medium-to-low voltage transformer	63
4.1.2	Communication network infrastructure	65
<b>4.2</b>	<b>Human behaviors</b>	<b>68</b>
4.2.1	Electricity-related practices	68
4.2.2	Participation willingness to demand response programs	69
<b>4.3</b>	<b>Houses</b>	<b>71</b>
4.3.1	Electric configuration	72
4.3.2	Thermal configuration	73
<b>4.4</b>	<b>The autonomous energy management system</b>	<b>74</b>
4.4.1	The smart meter	76
4.4.2	Communication protocols	76
4.4.3	Real-time control	78
<b>4.5</b>	<b>Electric loads</b>	<b>81</b>
4.5.1	Non-controllable loads	82
4.5.2	Non-interruptible loads	83
4.5.3	Electric vehicles	84
4.5.4	Thermal loads	86
<b>4.6</b>	<b>Distributed energy sources</b>	<b>97</b>
4.6.1	Solar panels	98
4.6.2	Other renewable sources of electricity	99
<b>4.7</b>	<b>Pricing structures</b>	<b>100</b>
4.7.1	Bihourly pricing	101
4.7.2	Real-time pricing	101
4.7.3	Prosumer pricing	103
<b>5</b>	<b>Formulation of the optimization problem</b>	<b>105</b>
<b>5.1</b>	<b>Computational optimization methods</b>	<b>106</b>
5.1.1	A quick review of optimization methods	107
5.1.2	A brief history of linear and integer programming	108
5.1.3	Canonical problem forms	109
<b>5.2</b>	<b>Bilevel parametric MILP formulation</b>	<b>112</b>
5.2.1	Sets and indices	112
5.2.2	Parameters and other constants	113
5.2.3	Control and state variables	114

5.2.4	Constraints . . . . .	115
5.2.5	Objective functions . . . . .	118
5.2.6	Alternatives to non-linearities . . . . .	120
5.2.7	From a bilevel to a sequential problem . . . . .	121
5.2.8	Robustness to strict constraint violations . . . . .	121
<b>5.3</b>	<b>Problem solving algorithms . . . . .</b>	<b>123</b>
5.3.1	The Branch-and-cut algorithm . . . . .	124
5.3.2	The Cutting-plane method . . . . .	124
5.3.3	The Branch-and-bound algorithm . . . . .	125
<b>5.4</b>	<b>Stochastic aspects . . . . .</b>	<b>126</b>
5.4.1	The Monte Carlo method . . . . .	126
5.4.2	Monte Carlo Sampling . . . . .	128
5.4.3	Error estimation using the Monte Carlo method . . . . .	129
5.4.4	Generation of scenarios to optimize . . . . .	129
<b>6</b>	<b>Simulation and results . . . . .</b>	<b>131</b>
<b>6.1</b>	<b>Simulation backbone . . . . .</b>	<b>132</b>
6.1.1	Creation of a block area along with household characteristics . . . . .	134
6.1.2	Scenario generation using Monte Carlo Sampling . . . . .	138
6.1.3	Tools for solving the programming problem . . . . .	144
6.1.4	Simulation parameters and assumptions . . . . .	147
<b>6.2</b>	<b>Introductory examples for the optimization results . . . . .</b>	<b>148</b>
6.2.1	Examples of electricity pricings . . . . .	149
6.2.2	Optimized power load of a 100-household block area . . . . .	150
<b>6.3</b>	<b>Benefits for the distribution grid . . . . .</b>	<b>153</b>
6.3.1	Optimization of the peak-to-average ratio . . . . .	153
6.3.2	Financial benefits for residential clients . . . . .	157
6.3.3	Impact on the distribution transformer's lifetime . . . . .	163
6.3.4	Participation to ancillary services . . . . .	166
<b>6.4</b>	<b>Sensitivity and robustness analysis . . . . .</b>	<b>167</b>
6.4.1	Dispersion of the peak-to-average ratio . . . . .	167
6.4.2	Monte Carlo error . . . . .	169
6.4.3	Penalty activations . . . . .	171
<b>6.5</b>	<b>Macroeconomic analysis . . . . .</b>	<b>172</b>
6.5.1	Welfare of the distribution grid . . . . .	173
6.5.2	Elasticity of the residential demand . . . . .	176

	<b>Final words</b> .....	<b>177</b>
<b>6.6</b>	<b>Conclusions</b> .....	<b>179</b>
<b>6.7</b>	<b>Future work</b> .....	<b>182</b>
6.7.1	Impact of elasticity on the wholesale market price .....	182
6.7.2	Participation to ancillary services .....	183
6.7.3	Real life application .....	183
6.7.4	Heuristics as alternative optimization methods .....	183

### III

## Appendix

<b>A</b>	<b>Additional data</b> .....	<b>187</b>
<b>A.1</b>	<b>The transmission grid</b> .....	<b>187</b>
<b>A.2</b>	<b>Electric vehicles</b> .....	<b>189</b>
<b>A.3</b>	<b>Creating PDFs from Belgian data</b> .....	<b>189</b>
A.3.1	Houses surfaces and envelope insulation .....	190
A.3.2	Electric vehicle models .....	191
A.3.3	Hot water tank sizes .....	193
A.3.4	Solar panel installation .....	193
<b>B</b>	<b>Additional result analysis</b> .....	<b>195</b>
<b>B.1</b>	<b>Time synchronization of the price and the base load power</b>	<b>195</b>
<b>B.2</b>	<b>Relative values of the peak-to-average ratio</b> .....	<b>196</b>
<b>B.3</b>	<b>Financial benefits</b> .....	<b>198</b>

## End matter

	<b>List of references</b> .....	<b>224</b>
	<b>List of figures</b> .....	<b>228</b>
	<b>List of tables</b> .....	<b>229</b>
	<b>Index</b> .....	<b>229</b>
