Abstract - Résumé	xi
Introduction	1
I Symmetries of maximal supergravity	9
1 Maximal supergravity in various dimensions	11
1.1 Field content and exceptional symmetries	12
1.2 Chiral supersymmetry	15
1.3 Infinite-dimensional symmetries	18
2 Enhancement of symmetries and Chern-Simons couplings	21
2.1 Minimal $D = 5$ supergravity and $G_{2(2)}$	22
2.2 $D = 11$ supergravity and $E_{8(8)}$	28
2.3 Scalar manifold and rigidity theorems	29
3 Off-shell electric-magnetic duality	31
3.1 Bianchi identities and equations of motion	32
3.2 Off-shell invariance: first order action	36
3.3 Choice of symplectic frames and the electric group	37
3.4 $4m$ versus $4m + 2$ space-time dimensions	40
4 $E_{7(7)}$-invariant black hole entropy	43
4.1 The F -invariant	43
4.2 The STU model	44
4.3 STU black holes	49
4.4 $\mathcal{N} = 8$ black holes	54

II	Four-dimensional gaugings	59
5	Supergravity gaugings	61
5.1	Gaugings of the Yang-Mills type	62
5.2	Embedding tensor formalism	67
5.3	Deformations of the first-order action	73
6	Introduction to BRST-BV deformation theory	77
6.1	Consistent deformations	77
6.2	BRST differential	79
6.3	Antibracket and obstructions	84
6.4	Length and depth	86
7	Deformations in a definite symplectic frame	89
7.1	Consistent deformations: ghost number zero	89
7.2	Local BRST cohomology at other ghost numbers	93
7.3	Antibracket map and structure of symmetries	97
7.4	Quadratic vector models	103
III	Six-dimensional exotic fields	107
8	Gravitational duality and dimensional reduction	109
8.1	Twisted self-duality of p -forms	110
8.2	Duality in linearized gravity	110
8.3	Reduction of chiral fields	113
9	First-order actions for twisted self-duality	121
9.1	Two-potential action for p -forms	122
9.2	Conformal geometry	123
9.3	Prepotential action for linearized gravity	128
9.4	Gravitino field and supersymmetry	131
10	Self-dual actions	141
10.1	The chiral 2-form	142
10.2	The $(2, 2)$ -tensor	144
10.3	The $(2, 1)$ -tensor	148
10.4	The exotic gravitino	152
11	Maximal supersymmetry in six dimensions	161
11.1	The $\mathcal{N} = (4, 0)$ theory	162
11.2	The $\mathcal{N} = (3, 1)$ theory	169
	Conclusions and perspectives	175

A	Appendices to part I	179
A.1	Conventions for part I	179
A.2	Duality of p -form fields	180
A.3	Dimensional reduction on a circle	183
A.4	Simple Lie algebras	186
A.5	Scalar coset Lagrangians	190
A.6	More on $\mathcal{N} = 8$ supergravity and $E_{7(7)}$	194
B	Appendices to part II	201
B.1	Conventions for part II	201
B.2	Pure gauge and auxiliary fields	201
B.3	Antibracket maps and descents	203
B.4	Derivation of Equation (7.68)	204
C	Appendices to part III	209
C.1	Young tableaux and generalized Poincaré lemmas	209
C.2	Cotton tensors of linearized supergravity	215
C.3	Equations of motion of chiral tensors	219
C.4	Dimensional reduction of chiral tensors	224
C.5	Maximal supergravity in five dimensions	229
C.6	Gamma matrices and spinors	235
C.7	$USp(2n)$ and reality conditions	238
	Bibliography	239
