1 Thesis overview	1
1.1 Motivation	1
1.2 Knowledge gaps	2
1.3 Research objectives	2
1.4 Methodology	3
1.5 Thesis outline	3
2 Research background	5
2.1 Categorical structural optimization	5
2.2 Machine learning and manifold learning	8
2.3 Optimization methods	10
2.3.1 Gradient-based methods	10
2.3.2 Metaheuristics	12
3 Manifold learning techniques	15
3.1 Principal component analysis	16
3.2 Multidimensional scaling	17
3.3 Isomap	18
3.4 Locally linear embedding	19
3.5 Kernel principal component analysis	20
3.6 Testing examples	21
3.6.1 Swiss Roll example	21
3.6.2 S-Curve example	21
3.6.3 Multiple cross-section example	23
3.6.4 Time cost comparison	30
3.6.5 Discussion on KPCA	30
Data distance	31
Angle change	34
Conclusions on KPCA	36
3.7 Partial conclusions and perspectives	36
4 Categorical optimization: a discrete evolutionary approach	37
4.1 Introduction	37
4.2 Representation of categorical variables	37
4.3 Redundant dimensionality reduction	38
4.3.1 Isomap	40
4.3.2 Intrinsic dimensionality estimation	42
4.4 Graph-based crossover and mutation operators	42
4.4.1 Graph-based crossover operator	42

4.4.2	Graph-based mutation operator	43
4.5	Numerical tests	44
4.5.1	The dome structure optimization with single categorical variable	44
4.5.2	The dome structure optimization with seven categorical variables	46
4.5.3	Dam structure design	51
4.5.4	Six-story rigid frame structure design	52
4.6	Partial conclusions and prospects	53
5	Categorical optimization: a two-stage search strategy	61
5.1	Introduction	61
5.2	Statement of single-objective constrained categorical optimization problems	61
5.3	Continuous search stage	62
5.3.1	Dimensionality reduction	62
5.3.2	The polynomial fitting and the fitting error estimation	62
5.3.3	A practical fitting example and comparison	64
5.3.4	The continuous search on the manifold	69
5.4	Neighbour search stage	70
5.4.1	Rounding-off criteria	70
5.4.2	Neighbour search	71
5.5	Numerical tests	73
5.5.1	The ten-bar structure optimization problem	73
5.5.2	The dome structure design problem	75
5.5.3	Effects of neighbour search parameters	86
5.5.4	Comparison of results	87
5.6	A fast neighbour search algorithm	91
5.7	Partial conclusions and prospects	94
6	Categorical optimization: a k-manifolds learning approach	99
6.1	Background	99
6.2	K-manifolds learning	100
6.2.1	Weighted principal component analysis	100
6.2.2	Optimization criteria	101
6.2.3	Optimization problem statement	102
6.2.4	Optimization algorithm for k-manifolds learning	103
6.2.5	A numerical test	103
6.3	Numerical tests	104
6.3.1	The 10-bar structure	104
6.3.2	The dam structure	112
6.3.3	The dome structure design	114
6.4	Partial conclusions and prospects	117
7	Conclusions, perspectives	121
7.1	Conclusions	121
7.2	Perspectives	122
A	Attribute catalog of bars	125
B	Attribute catalog of beams	129
	Bibliography	133
