

TABLE OF CONTENTS

REMERCIEMENTS.....	II
ABSTRACT	III
RÉSUMÉ	V
TABLE OF CONTENTS	VII
LIST OF TABLES	X
LIST OF FIGURES	XI
LIST OF ADDITIONAL DATA.....	XIII
1 Supplementary Data File 1.....	xiii
2 Supplementary Data File 2.....	xiv
3 Supplementary Data File 3.....	xiv
LIST OF ABBREVIATIONS	XV
INTRODUCTION.....	1
1 Introduction and rationale	1
2 The role of omics technologies in reshaping our understanding of breast cancer biology.....	3
2.1 Transcriptomic profiling of breast cancer and its clinical utility	3
2.2 The genomic revolution in breast cancer.....	4
3 Beyond the cancer genome and the importance of the immune microenvironment of breast cancer	8
4 The link between reproductive history and breast cancer	10
4.1 The impact of parity and age at first birth on breast cancer risk.....	10
4.2 The impact of parity and age at first birth on breast cancer prognosis	11
4.3 Biological mechanisms underlying pregnancy-induced breast cancer protection ...	12
5 Breast cancer diagnosed during pregnancy	14
5.1 Epidemiology	14
5.2 Prognosis	14
5.3 Clinical management	15
5.4 Biology of BCP.....	17
6 RANKL as a potential target in breast cancer patients	19
6.1 The role of RANK/RANKL in homeostasis.....	19
6.2 The role of RANK/RANKL in cancer.....	21
JUSTIFICATION OF THE THESIS.....	26
CHAPTER 1: THE IMPRINT OF REPRODUCTIVE HISTORY ON BREAST CANCER BIOLOGY	28

1	Introduction	29
2	Methods	30
2.1	Data acquisition.....	30
2.2	Patients selection	30
2.3	TILs evaluation	30
2.4	Statistical analysis	31
3	Results	32
3.1	Association between clinicopathological variables, parity, and age at first pregnancy	
	32	
3.2	The influence of parity and age at first pregnancy on the mutational landscape of breast cancer	34
3.3	The influence of parity and age at first pregnancy on somatic copy number alterations.....	36
3.4	The influence of parity and age at first pregnancy on mutational signatures	38
3.5	The influence of parity and age at first pregnancy on BRCAness.....	38
3.6	Integrative analysis of the genomic alterations and the transcriptomic profiles associated with parity and age at first pregnancy.....	38
3.7	The influence of parity and age at first pregnancy on tumor immune microenvironment.....	39
3.8	Pregnancy-associated breast cancers are associated with increased TILs infiltration	
	40	
4	Discussion.....	42
5	Supplementary Materials	46
CHAPTER 2: THE MOLECULAR CHARACTERIZATION OF BREAST CANCER DIAGNOSED DURING PREGNANCY.....		50
1	Introduction	51
2	Methods	52
2.1	Patients and samples	52
2.2	Transcriptomic profiling.....	53
2.3	Genome-wide copy number analysis.....	53
2.4	Library preparation and whole genome sequencing	54
2.5	Tumor heterogeneity.....	55
2.6	Mutational signature	56
2.7	Significance of the missense mutation in mucins producing a serine	56
2.8	Statistical analysis and survival analysis	57
3	Results	59
3.1	BCP and controls have similar somatic copy number alteration profiles.....	59
3.2	BCP shows a higher number of non-silent mutations	62
3.3	BCP is associated with a higher frequency of mutations in mucin gene family.....	64
3.4	BCP is enriched in mutational signature related to mismatch repair deficiency.....	67

4 Discussion.....	69
5 Supplementary Materials	71
5.1 Supplementary Figures.....	71
5.2 Supplementary Tables	80
CHAPTER 3: THE IMMUNOMODULATORY POTENTIAL OF DENOSUMAB IN BREAST CANCER	84
1 Introduction	85
2 Methods	87
2.1 Patients	87
2.2 Study design.....	87
2.3 ELISA	88
2.4 Immunohistochemistry staining	88
2.5 Pathological assessment	89
2.6 RNA Extraction and sequencing.....	89
2.7 Bioinformatics analysis.....	90
2.8 Statistical analysis	91
3 Results	92
3.1 Patient characteristics and safety	92
3.2 Denosumab activity and its effects on breast cancer.....	92
3.3 Exploration of the immunomodulatory role of denosumab	93
3.4 Predictive value of baseline biomarkers associated with tumor immune microenvironment response	97
4 Discussion.....	100
5 Supplementary Materials	103
CONCLUDING REMARKS AND PERSPECTIVES	107
