1	Introduction	7
1.1	Functional Data Analysis	7
1.2	Functional Time Series	8
1.3	Testing periodicity	10
1.4	Factor Models	13
1.5	Functional Factor Model	15
2	Testing periodicity in Functional Time Series	17
2.1	Introduction	17
2.2	Models for periodic functional time series	20
2.3	Test procedures in presence of Gaussian noise	22
2.3.1	Projection based approaches	22
2.3.2	Fully functional tests	24
2.3.3	Relation to MANOVA and functional ANOVA	25
2.4	Dependent non-Gaussian noise	26
2.5	Consistency of the tests	28
2.6	Application to pollution data	29
2.7	Assessment based on simulated data	30
2.8	Local asymptotic power	32
2.9	Summary	35
2.A	Discussion of Assumption 2.2.2	37
2.B	Details of the derivation of the tests of Section 2.3	37
2.C	Proofs of the results of Sections 2.4 and 2.5	39
2.D	Estimation of the covariance and of the spectral density	40
2.E	Local consistency	45
2.F	Empirical basis functions	48
3	Prediction of singular VARs and application to generalized dynamic factor models	51
3.1	Introduction	51
3.2	Estimating and predicting singular VAR processes	52
3.2.1	The Yule-Walker equations and condition numbers	52
3.2.2	Estimation and prediction	55
3.2.3	A regularization approach	58

3.3	Prediction of generalized dynamic factor models	60
3.4	Simulation	63
3.4.1	Trimming and forecasting a VAR	63
3.4.2	Comparison of FHLZ and TRIM	64
3.5	Empirical application	66
3.A	Tables	69
4	Forecasting Functional Time Series in High Dimension: a functional factor model approach	73
4.1	Introduction	73
4.2	Model and Representation Theorem	74
4.2.1	Notation	74
4.2.2	Model	76
4.3	Estimation	78
4.4	Information Criterion	80
4.5	Simulation	82
4.6	Conclusion	83
4.A	Orthogonal Projections	89
4.B	Proofs	90
4.B.1	Proof of the Representation Theorem	90
4.B.2	Proof of Theorem 4.3.1	98
4.B.3	Proof of Theorem 4.4.3	101
4.B.4	Background Results	108
