

Table of contents

Chapter 1: Unprimed vs. primed canvas

1. Encounters between fabric and paint
2. Overarching considerations, varying degrees of absorption
3. Looking and textility as method
4. Study delineations
5. Preparatory layers for a layered model of painting: the western painting format
6. The preparation as a ground vs fabric as a ground: color, light, expansion
7. Absorption, preliminary nuances and observations

Chapter 2: Absorption

1. Into cloth: lateral and medial oozing. The canvas as a permeable membrane, back to front
 - *Lateral and perpendicular oozing, horizontal and vertical seeping*
 - *Morris Louis' balancing act, a "sweet spot"*
 - *Back to front. Flatness and transparency*
2. Traces of absorption. Illusions and projective spaces

A. Traces of absorption and illusionism

1. Blurred edges and coffee ring deposits
2. Halos and burns. Paint not stopping at its own edge

Halos (of mediums and solvents)

Drawing with surface instead of line and illusions of scale. Paintings of giants.

Enamel absorption and halos

Pigment-deposit or shooting star halos

Turpentine burns

- *Mark Rothko's use of unprimed canvas and turpentine*
 - *Louis' turpentine and pigment deposits*
3. Bleeding edges: paint uncontained, absorption

and the weave in Frank Stella's unprimed canvas

4. Between edges and in paint, the weave
5. Binding medium
6. Flatness and illusionism - an intermediary conclusion, with Sam Gilliam's stretched beveled-edge paintings and draped paintings
 - Parenthesis in France

B. Projective spaces. The painting in front of itself.

Chapter 3: Adsorption

1. Introduction
2. Francis Bacon's linen
 1. *Turnaround*
 2. *A brush with the canvas, Bacon's touche*
 3. *Skins: sorption processes (soaked grounds and punctual impasto)*
 4. *Weaves under glass. Consequences of Bacon's preference for systematically showing his canvases behind reflective glass (in exhibition context) on perception by the viewer of the unprimed linen*
3. Seurat and the pointillist canvas, "à grain"

Chapter 4: Fabric interrupted. Selective preparation and systems of relations

1. "Selective" or "partial" preparation
2. Pieter Bruegel's *Parable of the Blind*
 - A. Bruegel's technique: probability and advantages of selective preparation?
 - B. Context: systems of relations or: what was happening mid 16th century in the Low Countries, and in Western thought?
3. David Hockney's *Mt Fuji and flowers*
 - A. (Selective) preparation as an "artistic device" in Hockney paintings. Before the Japan trip and Mt Fuji
 - A.1. Solid color shapes on/over and surrounded by raw canvas
 - A.2. Pools and liquidities of the canvas

B. Mt Fuji and Flowers

4. Pollock and Ryman: sites for contact

Borderline: selective priming in so-called all-over paintings

Alchemy and non-uniform application of primer (Pollock's edges)

Ryman's edges

Chapter 5: Renewed degree zero. A gap between the mind and the world

Barnett Newman unprimed

Sites for contact. Newman's verticals, Pollock's reach, Ryman's hand

Between the mind and the world
