Introduction	1
I Computational, Logical and Algebraic Characterizations of Rational Word Functions	9
1 Rational languages and rational functions	11
1.1 Words and languages	11
1.1.1 Words	11
1.1.2 Languages	12
1.2 Finite automata	13
1.2.1 Automata	13
1.2.2 Subclasses of automata	14
1.3 Algebraic characterization of rational languages	14
1.3.1 Congruences	14
1.3.2 Classes of congruences	17
1.3.3 Aperiodicity	18
1.4 Logics over words	20
1.4.1 Monadic second-order logic	20
1.4.2 MSO for words	21
1.5 Onward to transductions	22
1.5.1 Transductions and transducers	23
1.5.2 Logical transducers	24
2 Characterizations of rational functions over finite words	27
2.1 Sequential functions	28
2.1.1 Algebraic characterization of sequential functions	28
2.1.2 Minimization of sequential transducers	31
2.1.3 Determinization preserves aperiodicity	33
2.2 Algebraic characterization of rational functions	35
2.2.1 Bimachines and transductions	36
2.2.2 Bimachines and minimization	38
2.2.3 Look-ahead versus labeling	44
2.2.4 Canonical bimachine and characterization	47
2.3 Logical transducers	51
2.3.1 2-F transducers	52
2.3.2 2-F transducers and \mathbf{C} -bimachines	52

2.3.3	Logic-algebra transfer result	53
2.3.4	Decidable fragments	55
3	Characterizations of rational functions over infinite words	57
3.1	Sequential and quasi-sequential functions	58
3.1.1	Algebraic characterization of sequential functions	59
3.1.2	Minimization of sequential transducers	63
3.1.3	Quasi-sequential transductions	65
3.1.4	Determinization preserves aperiodicity	68
3.2	Canonical models for rational functions over infinite words	69
3.2.1	Bimachines and transductions	69
3.2.2	Left minimization of bimachines	70
3.2.3	Look-ahead versus labeling	76
3.2.4	Delay look-ahead	79
3.2.5	The ultimate look-ahead and a canonical bimachine for quasi-sequential functions	82
3.2.6	Composing look-aheads and a canonical bimachine	85
3.3	First-order definability of transductions over infinite words	86
3.3.1	Aperiodicity and first-order definability	86
3.3.2	Closure under composition	88
II	Specification and Synthesis of Transductions	89
4	Logics for transductions with origins	91
4.1	Transductions with origin	93
4.1.1	Origin graphs	93
4.1.2	Transductions	93
4.1.3	MSO-transducers	94
4.2	Logics with origins	95
4.2.1	MSO over word-to-word origin graphs	95
4.2.2	Model-checking	96
4.2.3	Satisfiability, validity, equivalence	96
4.2.4	Undecidable fragments	96
4.2.5	A new fragment	97
4.2.6	Expressing regular transductions	97
4.3	Reduction of the regular synthesis problem	99
4.3.1	Non-erasing transductions	100
4.3.2	Scott Normal Form	101
4.3.3	Output formulas	102
4.3.4	Sets of constraints	102
4.4	Uniformization algorithm	103
4.4.1	Predicate automata	104
4.4.2	Profiles	105
4.4.3	Validity	107
4.4.4	Consistency	108
4.4.5	Complete profile sequences	110
4.4.6	Soundness	111
4.4.7	Profile automaton	113

4.4.8	Synthesis	114
4.5	Words with ordered data	115
4.5.1	A logic for data words	116
4.5.2	From transductions to data words and back	116
4.5.3	Undecidable fragments	118
4.6	Decidable extensions of L_0	118
4.6.1	Existential extension	119
4.6.2	Single-origin predicates	120
Conclusion		125
