|--|-----------|
| <b>Introduction</b>                                    | <b>1</b>  |
| <b>1 Piecewise linear manifolds</b>                    | <b>7</b>  |
| 1.1 Simplicial complexes . . . . .                     | 7         |
| 1.2 Polyhedra . . . . .                                | 10        |
| 1.3 Piecewise linear manifolds . . . . .               | 13        |
| 1.4 Triangulations of smooth manifolds . . . . .       | 15        |
| 1.5 Differential forms on PL manifolds . . . . .       | 17        |
| <b>2 Piecewise linear symplectic manifolds</b>         | <b>19</b> |
| 2.1 Piecewise constant symplectic structures . . . . . | 20        |
| 2.2 Darboux's property . . . . .                       | 21        |
| 2.2.1 In dimension two . . . . .                       | 22        |
| 2.2.2 In other dimensions . . . . .                    | 23        |
| 2.3 Symplectic triangulations . . . . .                | 26        |
| <b>3 Triangulation of volume forms</b>                 | <b>29</b> |
| 3.1 Why not Moser ? . . . . .                          | 30        |
| 3.2 Relative Moser . . . . .                           | 31        |
| 3.3 Agreement near the skeleton . . . . .              | 32        |
| 3.3.1 Near vertices . . . . .                          | 32        |
| 3.3.2 Near the entire skeleton . . . . .               | 34        |
| 3.4 Several Consequences . . . . .                     | 36        |
| 3.5 Interpolation . . . . .                            | 38        |
| 3.6 Alternative proof in dimension two . . . . .       | 41        |
| 3.6.1 Odd triangulations . . . . .                     | 42        |
| 3.6.2 Agreement at vertices . . . . .                  | 43        |
| 3.6.3 Relative Moser . . . . .                         | 44        |

|  |           |
|--|-----------|
| <b>4 Symplectic jiggling lemma</b>   | <b>47</b> |
| 4.1 Crystalline subdivision of a complex . . . . .                         | 48        |
| 4.2 Symplectic jiggling lemma . . . . .                                    | 50        |
| 4.2.1 Statement of the lemma . . . . .                                     | 50        |
| 4.2.2 Proof of the symplectic jiggling lemma . . . . .                     | 53        |
| 4.3 Construction of PL symplectic manifolds . . . . .                      | 57        |
| <b>5 Symplectic submanifold of a triangulated manifold</b>                 | <b>61</b> |
| 5.1 Transverse triangulations . . . . .                                    | 62        |
| 5.2 PL approximation of a symplectic submanifold . . . . .                 | 66        |
| 5.3 Characteristic foliation . . . . .                                     | 69        |
| 5.4 Tubular neighborhood of a symplectic submanifold . . . . .             | 70        |
| 5.4.1 Symplectic structure on the total space of a vector bundle . . . . . | 70        |
| 5.4.2 Symplectic universal bundle . . . . .                                | 71        |
| 5.4.3 Symplectic normal bundle . . . . .                                   | 74        |
| <b>6 Perspectives</b>  | <b>75</b> |
