<b>Abstract</b>	<b>I</b>
<b>Acknowledgement</b>	<b>III</b>
<b>Nomenclature</b>	<b>VII</b>
<b>List of Figures</b>	<b>XIII</b>
<b>List of Tables</b>	<b>XV</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Overview . . . . .	1
1.2 State of the art . . . . .	1
1.2.1 History of the more electric aircraft study . . . . .	1
1.2.2 MEA technologies and problems . . . . .	3
1.2.3 Energy management of MEA . . . . .	6
1.2.4 High-level supervision control . . . . .	8
1.2.5 Fault diagnosis for electric actuating system . . . . .	10
1.3 Structure of the thesis and contribution . . . . .	12
1.4 Publications . . . . .	13
<b>2 Electrical Subsystem Architecture of MEA</b>	<b>15</b>
2.1 Introduction . . . . .	15
2.2 Typical electrical system of a MEA . . . . .	15
2.2.1 Power sources . . . . .	16
2.2.2 Electric power converters . . . . .	17
2.2.3 Power consumption equipment . . . . .	18
2.3 Analysis of the complexity degree of the system model . . . . .	19
2.3.1 Integrated model of a UAV electrical system . . . . .	20
2.3.2 Subsystem models of a UAV electrical system . . . . .	21
2.3.3 Comparison of battery in subsystem and integrated system models . . . . .	22
2.3.4 Comparison of BLDC in subsystem and integrated system models . . . . .	25
2.3.5 Comparison of servomotor in subsystem and integrated system models . . . . .	30
2.4 Summary . . . . .	34
<b>3 Model of PMSM</b>	<b>35</b>
3.1 Introduction . . . . .	35
3.2 Overview of PMSM fault modeling . . . . .	35
3.3 Healthy models of PMSMs . . . . .	36
3.3.1 Model in <i>abc</i> reference frame . . . . .	36
3.3.2 Model in stator and rotor reference frames . . . . .	37
3.3.3 Field-oriented control with PI controller . . . . .	38

3.4	PMSM model with inter-turn short-circuit . . . . .	40
3.4.1	Fault-current model of PMSM with ITSC . . . . .	40
3.4.2	Winding-function model of PMSM with ITSC . . . . .	44
3.4.3	ITSC models verification and comparison . . . . .	46
3.5	PMSM model with phase-to-phase short-circuit . . . . .	50
3.5.1	Fault-current model of PMSM with PPSC . . . . .	50
3.5.2	PPSC model verification . . . . .	55
3.6	Summary . . . . .	57
<b>4</b>	<b>Fault Detection and Isolation of PMSM</b>	<b>59</b>
4.1	Introduction . . . . .	59
4.2	Extended symmetrical component analysis . . . . .	59
4.2.1	Overview of PMSM fault residual generation . . . . .	59
4.2.2	Extended symmetrical component transformation . . . . .	60
4.2.3	Extended symmetrical components of the ITSC stator current . . . . .	62
4.2.4	Extended symmetrical components of the PPSC stator current . . . . .	63
4.2.5	Model verification . . . . .	65
4.3	Analytical fault indicators for PMSMs with ITSCs or PPSCs . . . . .	67
4.3.1	Introduction of fault detection and isolation indicators . . . . .	67
4.3.2	Fault detection and isolation indicators for ITSCs . . . . .	67
4.3.3	Fault detection and isolation indicators for PPSCs . . . . .	68
4.3.4	Extraction of sensitive variables of ITSC fault isolation indicator expression . . . . .	68
4.3.5	Extraction of sensitive variables of PPSC fault isolation indicator expression . . . . .	70
4.4	FDI method of PMSMs with ITSC or PPSC . . . . .	71
4.4.1	Introduction of CUSUM decision making algorithms . . . . .	71
4.4.2	Decision making functions of fault detection for ITSCs and PPSCs . . . . .	73
4.4.3	FDI method of PMSMs with ITSC or PPSC . . . . .	74
4.5	Verification and discussion of practical experiments . . . . .	75
4.5.1	CUSUM algorithm parameter determination . . . . .	75
4.5.2	FDI of ITSC fault in $a$ -phase . . . . .	76
4.5.3	FDI of PPSC fault between $a$ - and $b$ -phases . . . . .	78
4.5.4	Discussion on the threshold selection . . . . .	80
4.5.5	Discussion on faulty phase isolation with PPSC . . . . .	82
4.5.6	Comparison of fault isolation with the negative phase angle . . . . .	83
4.6	Summary . . . . .	84
<b>5</b>	<b>Hierarchical Adaptive Load Shedding</b>	<b>87</b>
5.1	Introduction . . . . .	87
5.2	Overview of load management methods . . . . .	88
5.3	Adaptive load priority regulation based on fuzzy logic . . . . .	88
5.3.1	Introduction of fuzzy logic . . . . .	88
5.3.2	Fuzzy inference system of the priority modification factor . . . . .	89
5.3.3	Load priority regulation with the priority modification factor . . . . .	90
5.4	Adaptive load shedding with a hierarchical control . . . . .	91
5.4.1	Load shedding strategy with the adaptive priorities . . . . .	91
5.4.2	Hierarchical control architecture . . . . .	92
5.4.3	Adaptive load shedding with the hierarchical control . . . . .	93
5.5	Validation and discussion of numerical experiments . . . . .	94
5.5.1	Modeling of a V-tail MEA . . . . .	94
5.5.2	Normal power source with healthy loads . . . . .	97
5.5.3	Generator failure with healthy loads . . . . .	97
5.5.4	Generator failure with faulty loads . . . . .	99

5.5.5	Comparison with a load shedding based on random priority . . . . .	102
5.6	Summary . . . . .	103
<b>6</b>	<b>Energy-efficient Aircraft Design Method</b>	<b>105</b>
6.1	Introduction . . . . .	105
6.2	Introduction of exergy analysis method . . . . .	105
6.2.1	Concept of exergy . . . . .	105
6.2.2	Exergy analysis method . . . . .	106
6.3	Aircraft system analysis based on EAM . . . . .	107
6.3.1	Exergy analysis method for aircraft system . . . . .	107
6.3.2	Exergy analysis of a V-tail MEA . . . . .	108
6.4	Aircraft design by means of improving energy efficiency . . . . .	118
6.4.1	Objective function . . . . .	118
6.4.2	Analysis and selection of decision variables . . . . .	118
6.4.3	Constraints of the aircraft design . . . . .	119
6.5	An example of the energy-efficient aircraft design . . . . .	119
6.5.1	Design of the objective function . . . . .	119
6.5.2	Selection of decision variables . . . . .	121
6.5.3	Selection of constraints . . . . .	122
6.5.4	Discussion of the optimization results . . . . .	122
6.6	Summary . . . . .	126
	<b>Summary, contribution and perspective</b>	<b>128</b>
	<b>Bibliography</b>	<b>147</b>
	<b>A Simulation model of the electrical system of the V-tail MEA</b>	<b>149</b>
	<b>B A group of GA optimization process</b>	<b>151</b>
