<b>Abstract</b>	<b>v</b>
<b>Acknowledgements</b>	<b>vii</b>
<b>1 Introduction: summary and main results</b>	<b>1</b>
1.1 Convex geometries and antimatroids . . . . .	1
1.2 Finding maximum-weight convex/feasible sets . . . . .	2
1.3 The realizability problem . . . . .	3
1.4 Contributions and collaborations . . . . .	4
<b>2 Background</b>	<b>5</b>
2.1 Basics . . . . .	5
2.2 Graph theory . . . . .	5
2.3 Order theory . . . . .	6
2.4 Geometry . . . . .	7
2.5 Complexity theory . . . . .	7
<b>3 An abstract notion of convexity</b>	<b>9</b>
3.1 Convex geometries . . . . .	9
3.1.1 From closure operators to convex geometries . . . . .	9
3.1.2 Antimatroids and shellings . . . . .	12
3.1.3 Copoints and bases . . . . .	14
3.1.4 Free sets, circuits and roots . . . . .	15
3.1.5 Occurrences, applications and research topics . . . . .	17
3.2 Examples of convex geometries . . . . .	19
3.2.1 Convex geometries on posets . . . . .	19
3.2.2 Shellings of chordal graphs . . . . .	20
3.2.3 Affine convex geometries . . . . .	22
3.2.4 Search antimatroids in (directed) graphs . . . . .	24
3.2.5 Miscellaneous . . . . .	25

<b>4</b>	<b>The maximum-weight convex set problem</b>	<b>27</b>
4.1	A classic optimization problem . . . . .	27
4.1.1	Problem definition . . . . .	28
4.1.2	Computational hardness . . . . .	29
4.1.3	Note on polyhedral results . . . . .	31
4.2	Special cases solvable in polynomial time . . . . .	31
4.2.1	Result for poset convex geometries . . . . .	31
4.2.2	Result for double poset convex geometries . . . . .	33
4.2.3	Result for tree convex geometries on vertices . . . . .	34
4.2.4	Result for tree convex geometries on edges . . . . .	35
4.2.5	Result for affine convex geometries in the plane . . . . .	35
4.3	The case of split graphs . . . . .	36
4.3.1	Characterization of the feasible sets . . . . .	36
4.3.2	Connection between split graph shellings and posets . . . . .	41
4.3.3	The base poset . . . . .	44
4.3.4	Optimization results . . . . .	46
4.3.5	Free sets and circuits characterization . . . . .	47
4.3.6	Beyond this special case . . . . .	49
<b>5</b>	<b>Finding a maximum-weight convex set in a chordal graph</b>	<b>51</b>
5.1	More on chordal graphs . . . . .	51
5.1.1	Definitions . . . . .	51
5.1.2	The clique-separator graph . . . . .	52
5.2	Problems . . . . .	53
5.2.1	Main problem . . . . .	53
5.2.2	Dummy vertices and sub-problems . . . . .	54
5.3	A special case solvable in polynomial time . . . . .	55
5.3.1	The rooted poset . . . . .	56
5.3.2	Reduction to a poset problem . . . . .	58
5.4	A polynomial-time algorithm . . . . .	60
5.4.1	Computation phase . . . . .	61
5.4.2	Preprocessing . . . . .	63
5.5	Analysis . . . . .	64
5.5.1	Time complexity . . . . .	65
5.5.2	Detailed example . . . . .	67

<b>6</b>	<b>The realizability problem for convex geometries</b>	<b>71</b>
6.1	Basics of computational geometry . . . . .	71
6.1.1	Affine convex geometries . . . . .	72
6.1.2	Abstract order types and chirotopes . . . . .	73
6.1.3	Existential theory of the reals . . . . .	76
6.2	Hardness result for the realizability problem . . . . .	77
6.2.1	Overview . . . . .	77
6.2.2	Technical properties . . . . .	78
6.2.3	The fixed ring . . . . .	83
6.2.4	The reduction . . . . .	84
<b>7</b>	<b>Conclusion</b>	<b>89</b>
7.1	Further work . . . . .	89
7.2	Closing remark . . . . .	90
<b>A</b>	<b>Allowable sequences and realizability problems</b>	<b>91</b>
A.1	Allowable sequences . . . . .	91
A.2	Realizability for allowable sequence . . . . .	94
A.3	Results for simple allowable sequences . . . . .	95
A.4	Realizability for convex geometries . . . . .	96
