

Table of contents

Abstract.....	8
List of abbreviations	9
I. Introduction	11
1. $\gamma\delta$ T cells, the unconventional T lymphocytes.....	11
1.1. Discovery of $\gamma\delta$ T cells and differences from $\alpha\beta$ T cells	12
1.2. T cell development in the thymus.....	14
1.2.1. VDJ recombination	15
1.2.2. $\gamma\delta$ T cell subsets	21
1.2.3. Development scheme in mouse and human	22
2. V γ 9V δ 2 T cells, activation and signalling.....	26
2.1. TCR activation by (phospho)antigens	26
2.1.1. Butyrophilins, sensor of phosphoantigens	28
2.2. Co-stimulation and signalling	31
3. Effector functions of the V γ 9V δ 2 T cells	34
3.1. Cytotoxicity – the granule exocytosis pathway.....	34
3.2. Cytokine production.....	36
3.3. Regulation of the immune response	37
4. V γ 9V δ 2 T cells in cancer immunotherapy	40
4.1. Strategies for therapeutic manipulation of V γ 9V δ 2 T cells.....	41
4.2. Obstacles and how to overcome them	43
5. Immune response of V γ 9V δ 2 T cells to <i>Mycobacterium</i>	46
5.1. <i>Mycobacterium tuberculosis</i>	46
5.2. Attenuated <i>Mycobacterium bovis</i>	49
6. Immune system in neonate and infant	51
6.1. Bridge between the tolerant foetal and vigorous adult immune system.....	51
6.2. Intervening in the neonatal host defence	53
II. Objectives	55
III. T cell receptor sequencing reveals the distinct development of foetal and adult human V γ 9V δ 2 T cells	56
Abstract	56
1. Introduction	57
2. Materials and Methods.....	59
2.1. Human cell material.....	59
2.2. Flow cytometry, sorting and cell cultures	59
2.3. TCR γ and TCR δ NGS.....	60
2.4. Statistical analysis	62
3. Results.....	63

3.1.	Adult and foetal blood V γ 9V δ 2 T cells show a different CDR3 repertoire	63
3.2.	Expansion of phosphoantigen-reactive foetal blood V γ 9V δ 2 T cells does not lead to an adult-type CDR3 repertoire	70
3.3.	Foetal and post-natal V γ 9V δ 2 thymocytes express a different CDR3 repertoire .	72
3.4.	Recombination of the germline-encoded public TRGV9-TRJP CDR3 sequence.	78
3.5.	HMB-PP-expanded post-natal V γ 9V δ 2 thymocytes express an adult blood-type CDR3 repertoire	81
3.6.	The generation of foetal-like or adult-like V γ 9V δ 2 T cells is HSPC-dependent....	84
4.	Discussion.....	86
IV.	Foetal public V γ 9V δ 2 T cells expand and gain potent cytotoxic functions early after birth	90
	Abstract	90
1.	Introduction	91
2.	Materials and Methods.....	93
2.1.	Study Population - Human cell material	93
2.2.	Flow cytometry, sorting and cell cultures	94
2.3.	TCR γ and TCR δ high-throughput sequencing	96
2.4.	Statistical analysis	97
3.	Results.....	98
3.1.	V γ 9V δ 2 T cells expand early after birth	98
3.2.	Only the 10-week-old V γ 9V δ 2 TRD repertoire is public and foetal-derived	100
3.3.	Foetal-derived V γ 9V δ 2 T cells get activated and become highly cytotoxic rapidly after birth	108
3.4.	Cytokine expression capacity by V γ 9V δ 2 T cells is mainly determined before birth	114
3.5.	Phosphoantigen-reactivity remains stable early after birth	114
3.6.	BCG vaccination at birth does not alter the TCR repertoire nor functional differentiation	117
4.	Discussion.....	125
V.	General discussion.....	128
1.	Insight by CDR3 repertoire analysis	128
1.1.	Gamma versus delta chain repertoire	128
1.2.	Early life versus adult repertoire	129
1.3.	Driving the generation of V γ 9V δ 2 T cells.....	130
1.4.	Country of origin impact on repertoire	131
2.	Expansion of foetal-derived V γ 9V δ 2 at 10 weeks after birth	131
2.1.	V γ 9V δ 2 innateness versus nonV γ 9V δ 2 $\gamma\delta$ T cells	131
2.2.	Function at 10 weeks after birth	132
3.	10 weeks versus adulthood.....	132

4. Effect of BCG immunisation on V γ 9V δ 2 T cells.....	133
4.1. BCG influence on repertoire and function.....	133
4.2. Speculations on absence of BCG effect on neonatal V γ 9V δ 2 T cells.....	134
VI. Conclusion	136
VII. Perspectives.....	138
VIII. References.....	141
Annex.....	156
