

TABLE OF CONTENTS

ABSTRACT	i
RÉSUMÉ	ii
ACKNOWLEDGEMENT	iv
1 Introduction	1
1.1 Context - contact lines in nature, industry and everyday life	1
1.2 Basic concepts - deformable interfaces and surface tension	3
1.3 Statics of deformable interfaces - the Young-Laplace law	5
1.3.1 A derivation of the Young-Laplace law	5
1.3.2 Static interfaces of interest and capillary forces	7
1.3.2.1 Spherical interfaces	7
1.3.2.2 Cylindrical interfaces	9
1.3.2.3 Almost flat interfaces	10
1.3.2.4 Net force on two-dimensional interfaces	10
1.3.2.5 Axisymmetric interfaces in general	12
1.4 Statics of contact lines - Young's law	15
1.4.1 Interpretation of Young's law	15
1.4.2 A derivation of Young's law	16
1.4.3 Young's law for a spherical drop	17
1.4.4 Wenzel and Cassie-Baxter relations	19
1.4.5 What oversimplified models fail to capture - stick-slip and contact angle hysteresis	20
1.4.6 Contact line statics on substrates with heterogeneous wetting properties	22
1.4.6.1 Situation at fixed volume	24
1.4.6.2 Effect of externally varying the volume	25
1.4.7 Deformed contact lines - Theory of Joanny and de Gennes . .	28

TABLE OF CONTENTS

vi

1.5	Dynamics of contact lines	30
1.5.1	Scaling arguments based on hydrodynamics	30
1.5.1.1	Tanner's law	32
1.5.2	Cox-Voinov relation	32
1.5.3	Molecular-kinetic theory	34
1.6	Objectives and overview of the thesis	35
2	Contact angle hysteresis in a microchannel: statics	37
2.1	Introduction	37
2.2	Model formulation and theoretical framework	40
2.2.1	Definition of the system	40
2.2.2	Occurrence of contact angle hysteresis	41
2.2.3	Graphical force balance	43
2.3	Results	46
2.3.1	Hysteresis threshold and phase-plane plots	46
2.3.1.1	Smooth heterogeneities	46
2.3.1.2	Sharp heterogeneities	47
2.3.2	From large to small heterogeneity length scale: the macroscopic limit.	52
2.3.3	Scaling laws of the hysteresis force	55
2.3.3.1	Near threshold behavior	55
2.3.3.2	Dilute system of wetting defects	56
2.3.3.3	Periodic heterogeneity	57
2.4	Conclusions and perspectives	61
3	Contact line stick-slip motion on micrometer-size wavy fibres	62
3.1	Introduction	63
3.2	Theoretical framework	65
3.2.1	Occurrence of stick-slip and hysteresis	66
3.2.2	Capillary force and free energy	66
3.3	Results	70
3.3.1	Energy dissipation during the jump	70
3.3.2	Scaling relation between jump length and dissipated energy	72
3.3.2.1	Near threshold behavior	72

TABLE OF CONTENTS

vii

3.3.2.2	Comparison with experiments	73
3.3.3	Advancing-receding cycle	75
3.4	Concluding remarks	78
3.4.1	Summary	78
3.4.2	Link with scaling laws predicted in chapter 2	78
3.4.3	Procedure to reconstruct fibre topography or chemical heterogeneity from tensiometric measurements	79
3.4.3.1	Wavy fibre with small scale heterogeneity	79
3.4.3.2	Chemically heterogeneous cylindrical fibre	82
4	Contact angle hysteresis in a microchannel: dynamics	85
4.1	Introduction	86
4.2	Model formulation and theoretical framework	88
4.2.1	Statics: controlled piston position versus controlled external force	88
4.2.1.1	Constraint of fixed piston position	90
4.2.1.2	Constraint of fixed external force	92
4.2.2	Dynamics: controlled piston velocity versus controlled external force	93
4.2.2.1	Dynamics with fixed piston velocity	93
4.2.2.2	Dynamics with fixed external force	94
4.2.3	Discussion of the modeling assumptions	94
4.3	Results and discussion	96
4.3.1	Qualitative comparison between the two cases	96
4.3.2	Scaling laws between force and velocity	98
4.3.2.1	Homogeneous case	98
4.3.2.2	Heterogeneous case	98
4.3.2.3	Predictions for the molecular-kinetic theory	101
4.3.3	Dynamic angle-contact line velocity characteristics	101
4.3.4	Depinning velocities	104
4.4	Conclusions and perspectives	107
4.4.1	Summary	107
4.4.2	Adaptation to the configuration of an AFM-tip	108

TABLE OF CONTENTS

viii

5	Extension to other configurations and geometry-specific effects	110
5.1	Introduction	110
5.2	Modelling of axisymmetric and 2D cases	112
5.2.1	Statics	112
5.2.2	Dynamics	113
5.3	Systems with a single contact line	114
5.3.1	Liquid in a microchannel	114
5.3.2	Meniscus around a fibre	114
5.3.3	Liquid column in a capillary tube	116
5.3.4	Drop on a substrate	117
5.3.4.1	Qualitative difference with previous configurations: the absence of a threshold	117
5.3.4.2	Electrowetting of a drop - stick stage at constant volume	118
5.4	Systems with two contact lines	122
5.4.1	Microchannel with non-identical walls	122
5.4.1.1	Simultaneous jumps in opposite directions	124
5.4.2	Liquid bridge between non-identical plates	127
5.4.3	Liquid column in a capillary tube with two liquid-air interfaces	127
5.4.3.1	Falling of the liquid column	129
5.4.4	Drop around a cone - model for the drop collection on the needles of certain species of desert plants	131
5.4.5	Drop between two non-parallel plates - model for the feeding mechanism of the Phalarope bird	132
5.4.5.1	Mandibular propulsion	133
5.5	Extension to the 3D case	136
5.5.1	Model formulation and solution method	136
5.5.1.1	A static interface shape: an axisymmetric parabolic drop	138
5.5.2	Test cases	139
5.5.2.1	Spreading on a perfect wetting substrate- Tanner's law	139
5.5.2.2	Axisymmetric substrate - Stick-slip rooted in statics	141
