

## TABLE OF CONTENTS

	<b>Page</b>
<b>List of Tables</b>	<b>xv</b>
<b>List of Figures</b>	<b>xvii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 The role of marine sediments in the global carbon cycle and climate . . . . .	1
1.2 Controls of degradation and preservation of organic matter in marine sediments .	3
1.3 Organic matter degradation in diagenetic models . . . . .	9
1.4 Research objectives . . . . .	11
<b>2 Sensitivity study on the influence of apparent organic matter reactivity on benthic-pelagic coupling</b>	<b>15</b>
2.1 Introduction . . . . .	15
2.2 Methods . . . . .	17
2.2.1 Model description . . . . .	17
2.2.2 Global Transect Sensitivity Study . . . . .	26
2.2.3 OM Sensitivity Analysis . . . . .	27
2.2.4 Analysis of model output . . . . .	28
2.3 Results and Discussion . . . . .	30
2.3.1 Sensitivity analysis on integrated degradation rates . . . . .	30
2.3.2 Sensitivity analysis on TEA fluxes . . . . .	34
2.3.3 Conclusion . . . . .	37
<b>3 Apparent benthic OM reactivity in marine sediments revealed by inverse modelling of sulphate and methane dynamics</b>	<b>39</b>
3.1 Introduction . . . . .	39
3.2 Methods . . . . .	42
3.2.1 Study sites . . . . .	42
3.2.2 Model description . . . . .	43
3.3 Results and discussion . . . . .	52

---

**TABLE OF CONTENTS**

---

3.3.1	Constraining OM reactivity parameters on global scale . . . . .	52
3.3.2	Influence of OM reactivity on benthic-pelagic coupling . . . . .	64
3.4	Conclusion . . . . .	70
<b>4</b>	<b>OMEN-SED(-RCM): A computationally efficient diagenetic model with a pseudo-RC representation of OM degradation dynamics</b>	<b>79</b>
4.1	Introduction . . . . .	79
4.2	Model description . . . . .	83
4.3	Results and Discussion . . . . .	86
4.3.1	Case Study: Sediment Core simulations . . . . .	86
4.3.2	Case study: Simulation of Global Ocean Transect . . . . .	89
4.3.3	Global application . . . . .	93
4.3.4	Depth of the sulfate methane transition (SMTZ) . . . . .	97
4.4	Conclusion . . . . .	99
<b>5</b>	<b>Regional and global patterns of apparent OM <i>k</i> in marine sediments as revealed by inverse modelling of DOU rates</b>	<b>101</b>
5.1	Introduction . . . . .	101
5.2	Methods . . . . .	105
5.2.1	Global DOU data set . . . . .	106
5.2.2	Diagenetic model OMEN-SED-RCM . . . . .	106
5.2.3	Model Forcing and Boundary Conditions . . . . .	109
5.2.4	Inverse Modelling . . . . .	110
5.3	Results and Discussion . . . . .	114
5.3.1	Evaluation of model performance in capturing local and global benthic oxygen dynamics . . . . .	114
5.3.2	Intra-regional trends in apparent OM reactivity . . . . .	115
5.3.3	Inter-regional trends in apparent OM reactivity . . . . .	120
5.3.4	Global distribution of apparent OM reactivity . . . . .	144
5.4	Conclusion . . . . .	147
<b>6</b>	<b>Global estimates of carbon preservation &amp; degradation and the role of benthic-pelagic coupling.</b>	<b>151</b>
6.1	Introduction . . . . .	151
6.2	Methods . . . . .	153
6.2.1	Model Approach . . . . .	153
6.2.2	Boundary conditions for benthic provinces . . . . .	154
6.2.3	Constraints on Apparent OM Reactivity . . . . .	155
6.2.4	Calculating fluxes and depth-integrated rates . . . . .	157

---

TABLE OF CONTENTS

6.3 Results and discussion . . . . .	161
6.3.1 Regional Patterns in Benthic TEA Fluxes . . . . .	161
6.3.2 Global estimate of TEA fluxes and degradation rates . . . . .	164
6.4 Conclusion . . . . .	166
<b>7 Summary and outlook</b>	<b>175</b>
7.1 Summary of main findings . . . . .	175
7.2 Considerations and future outlook . . . . .	178
7.2.1 Numerical or analytical: which one should it be? . . . . .	178
7.2.2 Implications for anthropogenic global warming and change . . . . .	179
7.2.3 A plea on what to measure and focus on in the future . . . . .	180
7.2.4 Future outlook: Focus on coastal dynamics . . . . .	181
7.2.5 Future outlook: Global BRNS simulation . . . . .	182
7.2.6 Future outlook: Usage of machine learning in diagenetic modelling . . . . .	182
<b>A Appendix A</b>	<b>187</b>
A.1 Supplementary Material . . . . .	187
<b>B Appendix B</b>	<b>197</b>
B.1 POC concentration to flux conversion . . . . .	197
<b>C Appendix C</b>	<b>199</b>
C.1 BRNS reaction network and boundary conditions . . . . .	199
<b>D Appendix D</b>	<b>205</b>
D.1 OMEN-SED reaction network and 2G profile fit . . . . .	205
<b>E Appendix E</b>	<b>211</b>
<b>Bibliography</b>	<b>215</b>
