

TABLE OF CONTENTS

ACKNOWLEDGEMENTS	vii
ABSTRACT	ix
RESUME	xii
LIST OF FIGURES	xviii
LIST OF TABLES	xx
ABBREVIATIONS AND ACRONYMS	xxi
CHAPTER I	3
1. Introduction	5
1.1. Prelude	5
1.2. Context of the research	6
1.3. Problem Statement	10
1.4. Aims	12
1.5. Research questions, objectives and hypotheses	12
1.6. Research method	14
1.7. Contribution to knowledge.....	17
1.8. Overview of the thesis structure.....	17
CHAPTER II	19
Abstract	20
2. Urban form and sustainable urban planning: A review of the multiplicity of methods to analyse the urban system	21
2.1. Introduction	21
2.2. Urban form: methods of analysis and approaches	22
2.2.1. Historical approach	24
2.2.2. Typo-morphology approach.....	28
2.2.3. Spatial and configurational approach.....	33
2.2.4. Methodological morphological analysis timeline and connections	37
2.3. Urban form : a sustainable perspective of design criteria and metric systems	45
2.3.1. Formal concept.....	46
2.3.2. Dense urban form and solar access	49
2.3.3. Urban form energy indicators	50
2.4. Urban form to develop a sustainable and energy-efficient urban planning policy: an integrated conceptual model	52
2.5. Conclusion	53

CHAPTER III	56
3. Methodology	58
3.1. Introduction	58
3.2. Defining individual elements of urban form analysis	58
3.2.1. The plot (P)	59
3.2.2. The path (Pa)	59
3.2.3. The constructed space (B)	60
3.2.4. The void (V)	60
3.3. Defining the elements of urban form analysis, between themselves and in relation to other urban elements	63
3.3.1. City and district scale: defining the urban form's elements of analysis between themselves	63
A. Stationarity test	65
B. Lag selection	67
C. Johansen cointegration test	67
D. Granger causality test and VECM	68
E. Stability tests	69
3.3.2. District and building scale: studying the interaction of urban form elements with other urban elements	69
3.4. Integrated methodological framework	70
3.5. The Brussels-Capital Region case study	72
CHAPTER IV	75
Abstract	76
4. Urban form, road transport infrastructure and energy consumption in the Brussels-Capital Region: cointegration, correlation and causality analysis	77
4.1. Introduction	77
4.2. Empirical literature review	78
4.3. Overview of transport in the Brussels-Capital Region	80
4.3.1. Transport infrastructure and land use	83
4.3.2. Road mode transport pattern	86
4.3.3. Public transport patterns	88
4.4. Transport energy saving policies in the Brussels-Capital Region	90
4.5. Data description and empirical results	92
4.5.1. Description of data	93
4.5.2. Results	98
4.6. Conclusion and policy implications	104

CHAPTER V	107
<i>Abstract</i>	108
5. Interdependent energy relationships between buildings and plot ratio restriction in urban regeneration	109
5.1. Introduction	109
5.2. Overview of the Brussels-Capital Region case study	111
5.2.1. Building energy consumption in the BCR	111
5.2.2. Building energy saving policies in the BCR	113
5.2.3. Integrated morphological analysis of the European district	116
5.3. Definition of urban regeneration scenarios & 3D scenarios modelling	124
5.4. Experimental results and 3D spatial analysis	132
5.4.1. SE analysis results	132
5.4.2. SVF analysis results	137
5.5. Conclusion and prospects	139
CHAPTER VI	143
6. Conclusions and further work	145
6.1. Main findings of the research	145
6.1.1. At the city scale	148
6.1.2. At the district scale	148
6.1.3. At the street scale	148
6.1.4. At the building scale	149
6.2. Significance and contribution of the study	149
6.3. Methodological considerations and research limitations	151
6.4. Suggested further work	152
GLOSSARY	155
