

Table of Contents

Chapter 1: General Introduction	1
1.1. Sustainable Chemistry	1
1.2. Alternative Solvents	2
1.3. Biomass and Lignin	4
1.4. Valorisation of Lignin	6
1.5. Vanadium Triphenolamines	8
1.5.1. Synthesis	8
1.5.2. TPA metal complexes	9
1.5.3. VO-TPAs	10
1.6. Aim of the Thesis	12
1.7. References	13
Chapter 2: Mechanistic Study	17
2.1. State of the Art: Elucidations of Vicinal Diol C-C cleavages	18
2.1.1. Periodates and Pb(AcO) ₄	18
2.1.2. Silver catalysts	19
2.1.3. Iron catalysts	19
2.1.4. Cerium catalysts	20
2.1.5. Cobalt catalysts	21
2.1.6. Manganese catalysts	21
2.1.7. Palladium and Ruthenium catalysts	22
2.1.8. Molybdenum catalysts	22
2.1.9. Vanadium catalysts	23
2.2. Results and Discussion	27

2.2.1.	Preliminary insights	27
2.2.2.	Preliminary computational analysis	31
2.2.3.	Kinetic analysis	33
2.2.4.	MS analysis	35
2.2.5.	Substrates with better leaving groups and ¹⁸ O scrambling	42
2.2.6.	Kinetic isotope effects	44
2.2.7.	Multi-parametric correlations	46
2.2.8.	Linear free energy correlations	50
2.2.9.	Computational studies	51
2.2.10.	EPR studies on reduced V(III) and V(IV) Species	53
2.3.	Conclusions	63
2.4.	Experimental	65
2.5.	References	75
Chapter 3: Aerobic Oxidative Cleavage in Aqueous Media		77
3.1.	State of the Art: Micellar Catalysis	79
3.1.1.	Structural characteristics of micelles	79
3.1.2.	Catalytic reactions in micellar media	83
3.2.	Results and Discussion	90
3.2.1.	Incorporation studies	91
3.2.2.	Selection of the conditions	92
3.2.3.	Substrate scope	94
3.2.4.	Scaling up	97
3.2.5.	Improving recyclability	98

3.3. Conclusions	103
3.4. Experimental	104
3.5. References	114
Abbreviations	117
Acknowledgements	121
