1	Introduction .....	1
2	The Cystic Fibrosis Transmembrane Conductance Regulator (CFTR).....	2
2.1	CFTR structure .....	2
2.2	CFTR folding and maturation.....	3
2.3	CFTR function and regulation .....	4
2.4	Cystic Fibrosis .....	6
2.5	F508del .....	7
2.6	F508del-CFTR correction .....	8
	Revertant mutations .....	9
	Small molecules .....	9
	Nanobodies .....	10
	Osmolytes.....	11
	Reduced temperature .....	11
	Removal of the regulatory insertion.....	12
2.7	The knowledge gap .....	12
3	Nanobodies .....	14
3.1	Heavy-chain antibodies .....	14
3.2	Differences between nanobodies and variable heavy chain domains of conventional antibodies .....	14
3.3	Nanobody uses and properties .....	15
3.4	Molecular bases of nanobody properties .....	16
3.5	Nanobodies as stabilizers and conformational trapping agents.....	16
3.6	Nanobody generation and production.....	17
4	Intrinsic disorder and allostery.....	19
	Examples of allostery in IDRs and IDPs.....	20
	Constrained intrinsically disordered segments generate entropic forces.....	22
5	Single molecule FRET.....	23
5.1	Förster resonance energy transfer (FRET) .....	23
5.2	The single molecule advantage .....	25

5.3	Confocal microscopy setup and data registration .....	26
	The confocal principle .....	26
	Setup and data registration.....	27
	Burst analysis.....	29
5.4	Determination of FRET parameters .....	29
	FRET efficiency and stoichiometry ratio .....	29
	Correction factors.....	30
5.5	Fluorescence lifetimes .....	31
5.6	Other parameters.....	32
	Polarization anisotropy .....	32
	FRET-2CDE .....	33
	ALEX-2CDE .....	33
	Burst duration.....	33
5.7	Two-dimensional FRET analysis .....	34
	Anisotropy vs. fluorescence lifetime – Tumbling and rotational freedom of the dyes.....	34
	FRET efficiency vs. donor lifetime – Dynamic behaviour.....	34
5.8	Photon distribution analysis .....	36
6	Aims and approach .....	38
7	Results.....	40
	Disclaimer .....	40
	The RI increases the conformational plasticity of several regions in NBD1 .....	41
	The conformational landscape of the RI features distinct states .....	42
	Nanobodies G11a and T1a promote substates of the RI.....	43
	Nanobodies G11a and T1a bind the RI and the F508 loop .....	44
	The $\beta$ -strand-swapped conformation compared to the canonical conformation .....	47
	The $\beta$ -strand-swapped conformation is adopted by CFTR and gating compatible.....	48
	The S1 and S4 strands readily dissociate from the $\beta$ -sheet in the $\beta$ -subdomain.....	51
	The conformational equilibrium of NBD1 is reversible and regulated by ATP .....	53
	HDX reveals allosteric coupling between the F508 loop and the $\beta$ -subdomain.....	54

## Introduction

	The RI modulates allosteric communication between the ATP binding site and the $\alpha$ -subdomain .....	57
	F508del modulates the conformational equilibrium of NBD1 .....	58
	Unfolding of the S2 strand is promoted by F508del and correlates with NBD1 stability .....	60
	Population of the $\beta$ SS state and S2 exposure correlate with DSF parameters.....	62
	SYPRO Orange-based DSF elucidates the unfolding pathway of NBD1 .....	66
8	Discussion and conclusions.....	68
9	Methods.....	74
	Human NBD1 expression and purification.....	74
	Nanobody cloning, expression and purification.....	74
	NBD1-ELISA assay.....	74
	Thermal shift assay (DSF).....	75
	Crystallization trials.....	75
	Crystal structure determination.....	75
	Flow cytometry .....	75
	CFTR pull-down .....	76
	Cell-surface expression of CFTR.....	76
	SDS-PAGE and immunoblotting .....	76
	Patch-clamp electrophysiology .....	76
	Hydrogen deuterium exchange mass spectrometry .....	78
	Modeling of dye distributions using the FPS simulation program.....	79
	Site-directed mutagenesis .....	80
	NBD1 fluorophore labelling.....	80
	Single-molecule FRET data recording.....	80
	Single-molecule MFD-PIE-FRET data analysis.....	81
	Photon distribution analysis (PDA) .....	82
10	Appendix.....	83
11	Bibliography.....	110
