Alternative splicing in type 1 diabetes

The role of the splicing factor SRSF6 in pancreatic β -cell function and survival

Thesis submitted by Maria Inês DE OLIVEIRA ALVELOS

in fulfilment of the requirements of the PhD Degree in Biomedical and
Pharmaceutical Sciences

Thèse présentée en vue de l'obtention du titre de Docteur en Sciences
Biomédicales et Pharmaceutiques

Academic year 2020-2021

Supervisor: Professor Miriam Cnop

Co-supervisor: Professor Décio L. Eizirik

ULB Center for Diabetes Research

COST is supported by the EU Framework
Programme Horizon 2020

Université Libre de Bruxelles (ULB)

Faculty of Medicine

PhD program in Biomedical and Pharmaceutical Sciences

Alternative splicing in type 1 diabetes

The role of splicing factor SRSF6 in pancreatic β -cell
function and survival

Maria Inês DE OLIVEIRA ALVELOS

in fulfilment of the requirements of the PhD Degree in Biomedical and
Pharmaceutical Sciences

Thèse présentée en vue de l'obtention du titre de Docteur en Sciences
Biomédicales et Pharmaceutiques

Members of the jury:

Professor Ingrid LANGER (President)

Professor Bernard CORVILAIN

Professor Miriam CNOP (Supervisor)

Professor Rachel DEPLUS

Professor Décio L. EIZIRIK (Co-supervisor)

Professor Marie-Isabelle GARCIA

Professor Manuel IRIMIA

Professor Arnaud ZALDUMBIDE

Maria Inês de Oliveira Alvelos was supported by a FRIA PhD fellowship from the Fonds de la Recherche Scientifique - FNRS (reference no. 26410496); COST: European Cooperation in Science & Technology (COST Action BM1207 – Networking towards clinical application of antisense-mediated exon skipping; COST Action CA17103 - Delivery of Antisense RNA Therapeutics); and Welbio/FRFS (n° WELBIO-CR-2019C-04).

TABLE OF CONTENTS

<i>Acknowledgments</i>	4
<i>Summary</i>	6
<i>Resumé</i>	8
<i>List of abbreviations and acronyms</i>	11
<i>Publications constituting this thesis</i>	16
<i>Participation in other publications from the group</i>	16
1. INTRODUCTION	17
1.1 The physiology of the human pancreatic islet.....	17
1.2 How do pancreatic β -cells work?.....	18
1.3 Definition and classification of diabetes mellitus.....	21
1.4 Type 1 Diabetes (T1D).....	23
1.4.1 Diagnosis	23
1.4.2 Epidemiology	24
1.4.3 Pathogenesis of T1D	24
1.4.4 Autoimmunity	26
1.4.5 Genetic and environmental factors leading to T1D	27
1.4.6 Prediction and prevention	31
1.5 The break of tolerance and immunopathology of T1D	33
1.5.1 The specificity towards the β -cells	34
1.6 Mechanisms of β -cell demise.....	37
1.6.1 Fas/FasL system.....	38
1.6.2 Perforin and Granzymes	39
1.6.3 β -cell death induced by pro-inflammatory cytokines	39
1.7 Another layer of complexity: the splicing process	44
1.7.1 Splicing regulation and the spliceosome.....	44
1.7.2 Alternative splicing	46
1.7.3 Splicing regulatory networks	52
1.7.4 Studying splicing networks using genome-wide approaches.....	54
1.7.5 The molecular mechanisms behind the regulation of alternative splicing and common features of alternative exons	60
1.7.6 Alternative splicing and disease	61
1.7.7 Alternative splicing and T1D	62
1.7.8 Modulation of alternative splicing.....	64
2. SPECIFIC AIMS OF THIS THESIS	66
3. RESULTS	67
3.1 Article I.....	67
3.2 Article II.....	89
4. GENERAL DISCUSSION	146
5. CONCLUSIONS	153
6. FUTURE PERSPECTIVES	155
7. REFERENCES	157
