

## Index

1 Introduction.....	1
2 Material and methods.....	1
2.1 Study site.....	1
2.2 Population.....	2
2.3 Techniques.....	2
2.4 Statistical analysis.....	2
3 Evolution of diagnostic virology.....	2
3.1 A short history of Virology: discovery of viruses.....	2
3.2 Cell cultures: the first revolution for viral diagnostic .....	4
3.3 Antigen detection tests: a compromise between speed and sensitivity.....	13
3.4 Nucleic acid amplification tests (NAATs): an ongoing revolution .....	20
3.5 State of play on direct viral detection tests.....	28
4 Clinical input of NAAT for viral diagnostic .....	37
5 Discussion.....	50
6 Perspectives in direct viral diagnosis .....	52
7 Conclusion .....	54
8 References.....	55

## Table of figures

Figure 1: Negative contrast electron microscopy of selected viruses. ....	3
Figure 2: Cell culture photographs (various magnifications) .....	7
Figure 3: Principle of direct and indirect immunofluorescence (IF) for diagnostic in virology .....	13
Figure 4: Principle of immunochromatographic tests .....	14
Figure 5: Principle of PCR technique describing the 3 main steps, denaturation, annealing and extension.....	20
Figure 6: NEAR mechanism .....	22
Figure 7: Suggestion of an algorithm for the diagnosis of respiratory viruses.....	51

## Table of tables

Table 1: characteristic cytopathic effect (CPE) in tube cultures.....	5
Table 2: list of cell lines and virus susceptibility profiles.....	6
Table 3: sensitivity (Se) and specificity (Sp) of the different viral diagnostic tests for influenza A, influenza B and RSV.....	29
Table 4 (part 1): selection of articles over the impact of multiplex molecular tests for respiratory viruses on the management of patients.....	39
Table 4 (part 2) .....	40
