Abstract	10
1 Introduction and aims	13
1.1 Functional electrophysiological connectivity	13
1.2 Research questions and summaries	17
1.3 Outline	23
2 From sources to sensors and back: Neuromagnetism and magnetoencephalography	25
2.2 Measuring brain activity with MEG	25
2.2.1 The neural origin of MEG signals	25
2.2.2 MEG hardware and function	30
2.2.3 Data acquisition procedure	31
2.3 Inferring brain activity from MEG data	32
2.2.1 Sensor-space and source-space	32
2.2.2 The forward problem	35
2.2.3 The inverse problem	36
2.2.4 Minimum norm estimation	37
2.2.5 Beamforming	38
3 Uncovering brain networks: Functional connectivity	40
3.1 How neurons connect	40
3.2 Brain networks during tasks and at rest	40
3.2.1 Functional connectivity	40
3.2.2 Task-related functional connectivity	42
3.2.3 Resting-state functional connectivity	43
3.3 Modes of electrophysiological functional connectivity	46
3.3.1 Phase coupling measures	47
3.3.2 Amplitude coupling measures	50
3.3.3 Spatial source leakage	51
Preface to Chapter 4	53
4 Do the posterior midline cortices belong to the electrophysiological default-mode network?	56
4.1 Introduction	56
4.2 Methods	58
4.2.1 Data collection and preprocessing	58
4.2.2 Source reconstruction algorithms	59
4.2.3 Electrophysiological functional connectivity	60
4.2.4 Simulations of the default-mode network	61

4.3	Results	63
4.3.1	Empirical analysis of DMN connectivity at rest.....	63
4.3.2	Point-like PMC source with linear PMC-TPJ coupling.....	67
4.3.3	Spatially extended linear synchronization within the PMC	70
4.4	Discussion	72
4.4.1	The PMC is a part of the electrophysiological DMN	72
4.4.2	Linear synchronization structure at rest.....	73
4.4.3	A practical guideline for DMN resting-state studies.....	77
4.5	Supplementary methods and results	79
4.5.1	Robustness of empirical results against precise seed positioning.....	79
4.5.2	Robustness of empirical results against precise choice of DMN regions of interest.....	80
4.5.3	Impact of source-space grid resolution on the mPFC-PMC coupling estimate	81
4.5.4	Impact of one-dimensional source projection on connectivity estimation	82
4.5.5	Necessity of increased PMC variance in point-like PMC simulations	83
4.5.6	Establishing network-independent FC reduction with the LCMV beamformer.....	84
4.5.7	Necessity of bi-laterality for the linear PMC-TPJ coupling in point-like PMC simulations.....	85
Preface to Chapter 5: Task-modulation and clustering		87
5	Intrinsic/extrinsic duality of large-scale neural functional integration in the human brain.....	94
5.1	Introduction	94
5.2	Methods and results.....	95
5.2.1	Network-level functional connectivity	95
5.2.2	Task-dependent states of amplitude correlation.....	97
5.2.3	Task-dependent states of phase coupling.....	101
5.2.4	Amplitude correlation modulates phase coupling.....	103
5.2.5	Phase coupling exhibits intrinsic dynamics	104
5.3	Discussion	107
5.4	Expanded methods and supplementary results	111
5.4.1	Expanded methods	112
5.4.2	Supplementary results	127
Preface to Chapter 6: Multiple sclerosis and cognition.....		149
6	Brain dysconnectivity relates to disability and cognitive impairment in multiple sclerosis.....	157
6.1	Introduction	157
6.2	Methods.....	158
6.2.1	Participants.....	158
6.2.2	Neuropsychological and neurological evaluation	160
6.2.3	Data acquisition.....	160
6.2.4	MEG data preprocessing	161
6.2.5	Source reconstruction	162
6.2.6	Connectivity analysis	163
6.2.7	Statistical analyses	166

6.2.8	Structural vs. functional modeling of CI.....	168
6.3	Results	169
6.3.1	Comparison of clinical and neuropsychological scores	170
6.3.2	Comparison of rsFC	170
6.3.3	Correlation between rsFC and EDSS score in MS patients	172
6.3.4	Correlation between rsFC and disease duration in MS patients.....	173
6.3.5	Correlations between rsFC and verbal fluency	175
6.3.6	Correlations between rsFC and cognitive fatigue	177
6.4	Discussion	179
6.4.1	Reduced sensorimotor network functional connectivity related to motor disability.....	180
6.4.2	Network-level reduction of functional connectivity of the default-mode network	182
6.4.3	Disease duration is correlated with reduced language network functional connectivity	183
6.4.4	Reorganization of resting-state networks correlated with verbal fluency and cognitive fatigue.....	184
6.4.5	Methodological considerations and limitations	186
6.4.6	Conclusion	189
7	Conclusions, perspectives and limitations	191
7.1	General conclusions and future perspectives	191
7.1.1	Dual task-related behaviors of intra-DMN phase synchronization	192
7.1.2	Is intrinsic FC broken or modulated by disease?	194
7.1.3	Intrinsic-extrinsic FC modulation.....	194
7.1.4	Time scales of intrinsic FC changes	195
7.2	General limitations	196
	Bibliography	201
