List of Tables xi

List of Figures xix

1 Introduction 1
- 1.1 Micro-structure representation . . . 4
- 1.2 Multiscale methods . . . 5
- 1.3 Data driven analysis . . . 6
- 1.4 Objectives of the present work . . . 8
- 1.5 Contributions . . . 9
- 1.6 Publications . . . 10

2 Computational homogenization 13
- 2.1 Introduction . . . 13
- 2.2 First order computational homogenization . . . 15
  - 2.2.1 Macroscopic formulation . . . 15
  - 2.2.2 Microscopic classical continuum . . . 16
  - 2.2.3 Scale transition . . . 18
- 2.3 Micro-scale boundary conditions . . . 19
- 2.4 Kinematic matrices and resolution . . . 21
- 2.5 Conclusions . . . 22

3 Micro-structure representation **23**
3.1 Introduction . . . 23
3.2 Open foam morphology generation . . . 26
3.2.1 DN-RSA . . . 26
3.2.2 "Voronoï" and "Plateau" level set functions . . . 30
3.3 Morphology reconstruction from experimental CT-scans . . . 34
3.3.1 Image analysis . . . 34
3.3.2 Inclusion treatment . . . 36
3.4 Detailed foam morphology features . . . 38
3.4.1 Open / close faces . . . 39
3.4.2 Strut cross-sectional area distribution . . . 39
3.4.3 Strut concavity . . . 42
3.4.4 Anisotropy . . . 44
3.5 Sharp edge extraction by means of local level set functions . . . 45
3.6 Finite element mesh generation . . . 48
3.7 Conclusions . . . 51

4 Analysis of generated open foam morphologies **53**
4.1 Introduction . . . 53
4.2 Morphology Quantification of the resulting RVEs . . . 54
4.2.1 Validation of the Laguerre parameters . . . 55
4.2.1.1 Methodologies . . . 55
4.2.1.2 Number of faces per cell and number of edges per face . 56
4.2.1.3 Edge length distribution . . . 56
4.2.1.4 Conclusions on the statistical distribution of RVE properties . . . 57
4.2.2 Verification of morphology variation . . . 59
4.2.2.1 Foam density . . . 59
4.2.2.2 Struts cross-section . . . 60
4.2.2.3 Generation of targeted morphology . . . 61
4.3 Discussions on morphology reconstructed from CT-scans . . . 63
4.4 Finite element modeling of the compressive response of foams . . . 66
4.4.1 RVE obtained using DN-RSA . . . 66
4.4.2 RVE obtained using DN-CT-SCAN with polyhedral packing from CT-scans . . . 69
4.5 Conclusions . . . 72

5 Neural Networks **75**
5.1 Introduction . . . 75
5.2 Introduction to Artificial Neural Networks (ANN) . . . 77
5.2.1 Feedforward Neural Network (FNN) . . . 78
5.2.2 Training of ANNs . . . 79
5.2.3 Validation and testing of data . . . 82

5.2.4 Recurrent Neural Networks (RNN) . . . 82
5.2.5 Double Feed forward Networks (FNN^2) . . . 84
5.2.6 Comparison of the architectures . . . 85
5.3 Generation of Datasets for ANNs . . . 85
5.3.1 Geometry Description for ANN study . . . 85
5.3.2 Description of the micro-scale BVP . . . 86
5.3.3 Proportional loading . . . 87
5.3.3.1 Proportional monotonic loading . . . 88
5.3.3.2 Proportional cyclic loading . . . 89
5.3.4 Random path loading for history dependent behavior . . . 89
5.3.5 State-based Representation . . . 90
5.4 Monotonic proportional loading conditions . . . 94
5.4.1 Preparation of Datasets for FNN . . . 94
5.4.2 Material Law with FNN . . . 95
5.4.3 Online computation with trained FNN . . . 96
5.4.4 Prediction of FNN surrogates . . . 96
5.4.4.1 Preparation of Datasets . . . 96
5.4.4.2 FNN model . . . 98
5.4.4.3 FNN Predictions . . . 99
5.4.4.4 Computation cost . . . 100
5.4.5 Discussions on FNN surrogates . . . 100
5.5 History Dependent Behavior . . . 101
5.5.1 Preparation of datasets for RNN . . . 103
5.5.2 Preparation of datasets for FNN^2 . . . 104
5.5.3 Material Law with RNN . . . 106
5.5.4 Material Law with FNN^2 . . . 106
5.5.5 Online computation with trained RNN . . . 106
5.5.6 Online computation with trained FNN^2 . . . 107
5.5.7 Verification of surrogates for history dependent analysis . . . 108
5.5.7.1 Preparation of Datasets . . . 108
5.5.7.2 LSTM-RNN Model . . . 110
5.5.7.3 GRU-RNN Model . . . 110
5.5.7.4 FNN^2 Model . . . 110
5.5.7.5 RNN Predictions . . . 112
5.5.7.6 FNN^2 Predictions . . . 113
5.5.7.7 Computational efficiency . . . 115
5.5.8 Surrogates for history dependent analysis: Discussions . . . 116
5.6 Conclusions . . . 118

6 General Conclusions and perspectives **123**

A Kinematics **127**

B J2-hyperelastic-based elasto-plastic material model 129

C State based representation 131

D Finite element formulation 133

E Angle based representation 135

F Activation functions 137

G Description of Specific RNN networks 142

Bibliography 162
