

Table of contents

Remerciements	ii
Résumé en français	v
List of publications and oral presentations.....	xvii
Abbreviation and acronyms.....	xix
Table of contents	xx
Overall Introduction.....	1
Why and how do we grow old to the end?	2
Role of the social context in ageing processes	15
Aims and scopes	20
Examples of the social environment influence in two social bird species.....	24
Chapter 1 Domino effect of conspecific aggression on oxidative status and telomere length in zebra finch.....	25
Chapter 2 Contrasting associations between nestling telomere length and pre and postnatal helpers' presence in a cooperatively breeding bird.....	44
Conclusion Part 1.....	63
Challenging the classical biomarkers of ageing in social insects.....	65
Chapter 3 Soma maintenance theories of ageing in the light of ants' lifespan diversity	67
Foreword: The long walk to qPCR amplification in ants	68
Conclusion Part 2.....	83
Exploring the interaction between ageing and division of labour in ants through omics.....	87
Foreword.....	88
Chapter 4 Division of labour leads to 3 distinct proteomes in black garden ants (<i>L. niger</i>).....	90
Chapter 5 A metabolomics study of task specialization in a social insect, the black garden ant (<i>Lasius niger</i>)	100
Chapter 6 Combining metabolomics and proteomics to disentangle age and caste effects in black garden ant workers (<i>Lasius niger</i>).....	123
Conclusion Part 3.....	146
Overall conclusion.....	149
Ageing modulation by social environment: an effect reinforced at high levels of sociality	149
Social insects, an exception to the classic mechanisms of ageing?	150
How universally regulated is ageing?	151
Future challenges in the understanding of ageing mechanisms.	153
Appendices	157
Appendix 1 Network age, a new dimension in healthy ageing.	158
Appendix 2 Hierarchical networks of food exchange in the black garden ant <i>Lasius niger</i> ...	167
Appendix 3 Chapter in the Encyclopedia of social insects: Lasius	183
