

## Contents

<b>Introduction</b>	<b>ix</b>
<b>I Theory overview and experimental state of the art</b>	<b>1</b>
<b>1 The Standard Model of particle physics and lepton flavor conservation</b>	<b>3</b>
1.1 Why the Standard Model? . . . . .	3
1.2 A more detailed view of the Standard Model . . . . .	4
1.2.1 Standard Model particles and forces . . . . .	4
1.2.2 Spontaneous symmetry breaking via the Brout-Englert-Higgs mechanism	7
1.2.3 The full Lagrangian of the Standard Model . . . . .	9
1.2.4 Why lepton flavor violating processes are forbidden in the Standard Model	10
1.3 Standard Model predictions and experimental tests . . . . .	12
1.4 Standard Model incompleteness and hints of new physics . . . . .	14
<b>2 Beyond the Standard Model, towards charged lepton flavor violation</b>	<b>17</b>
2.1 R-parity violating supersymmetry . . . . .	17
2.1.1 A short overview of supersymmetry theory . . . . .	17
2.1.2 R-parity conservation and violation . . . . .	18
2.2 Quantum black holes . . . . .	20
2.2.1 Extra dimensions and the weakness of gravity . . . . .	20
2.2.2 From extra dimensions to quantum black holes . . . . .	21
2.3 Lepton flavor violating heavy H bosons . . . . .	22
2.4 Lepton flavor violating heavy Z' bosons . . . . .	23
2.5 The experimental state of the art in charged lepton flavor violation searches . . . . .	25
2.5.1 Low energy searches for lepton flavor violation . . . . .	25
2.5.2 Lepton universality . . . . .	26
2.5.3 High energy searches for lepton flavor violation . . . . .	29
<b>II Experimental hardware and software</b>	<b>31</b>
<b>3 The Large Hadron Collider and the Compact Muon Solenoid</b>	<b>33</b>
3.1 The Large Hadron Collider . . . . .	33
3.1.1 Physical layout of the LHC . . . . .	33
3.1.2 Particle beams in the LHC . . . . .	35

3.1.3	The LHC injection chain . . . . .	36
3.1.4	Past and future operations timeline . . . . .	37
3.2	The Compact Muon Solenoid . . . . .	39
3.2.1	Overview of CMS and its coordinate system . . . . .	39
3.2.2	The silicon tracker . . . . .	40
3.2.3	The electromagnetic calorimeter . . . . .	42
3.2.4	The hadronic calorimeter . . . . .	43
3.2.5	The muon system . . . . .	45
<b>4</b>	<b>The CMS trigger system</b>	<b>51</b>
4.1	Level-1 trigger . . . . .	51
4.1.1	Calorimeter trigger . . . . .	52
4.1.2	Muon trigger . . . . .	53
4.1.3	Global trigger . . . . .	55
4.2	High Level Trigger . . . . .	56
4.2.1	HLT algorithms . . . . .	56
4.2.2	HLT rates monitoring . . . . .	57
4.2.3	Dataset overlap study . . . . .	60
<b>5</b>	<b>Object reconstruction in CMS</b>	<b>67</b>
5.1	Reconstruction of tracks, vertices and calorimeter clusters . . . . .	67
5.2	Muons . . . . .	70
5.3	Electrons . . . . .	72
5.4	Photons and hadrons . . . . .	76
5.5	Jets . . . . .	76
5.6	Missing transverse energy . . . . .	78
5.7	Taus . . . . .	79
5.7.1	Reconstruction of hadronic taus . . . . .	79
5.7.2	Identification of hadronic taus . . . . .	81
5.7.3	Study of the efficiency of the anti-jet discriminators . . . . .	84
<b>III</b>	<b>Analysis of lepton flavor violating final states</b>	<b>93</b>
<b>6</b>	<b>Datasets and simulations</b>	<b>95</b>
6.1	Datasets . . . . .	95
6.2	Simulations . . . . .	96
6.2.1	General overview of event simulation for collider experiments . . . . .	96
6.2.2	Simulation of lepton flavor violating new physics . . . . .	97
6.2.3	Simulation of Standard Model processes . . . . .	99
6.2.4	Normalization, pileup reweighting and other scale factors . . . . .	100
<b>7</b>	<b>Analysis strategy</b>	<b>103</b>
7.1	Trigger paths and event selection . . . . .	103
7.2	Discriminating variables: invariant mass and collinear mass . . . . .	106
7.3	Background estimation . . . . .	114
7.4	Tau identification: comparison between boosted decision trees and DeepTau algorithms . . . . .	117

<b>8 Data-driven background estimations</b>	<b>121</b>
8.1 Data-driven background estimations in the $e\mu$ final state . . . . .	121
8.1.1 Electron and muon fake rates . . . . .	121
8.1.2 Validation with the same sign method . . . . .	122
8.2 Backgrounds with jet $\rightarrow \tau$ fakes . . . . .	124
8.2.1 The fake factor method . . . . .	126
8.2.2 Fake factors from different control regions . . . . .	127
8.2.3 Fake factor dependence on the light lepton $p_T$ . . . . .	128
8.2.4 Validation using simulated events . . . . .	131
8.2.5 Fake factor dependence on jet flavor . . . . .	136
<b>9 Signal region events and statistical analysis</b>	<b>139</b>
9.1 Systematic uncertainties . . . . .	139
9.2 Lepton kinematics and mass plots . . . . .	142
9.3 Statistical analysis and limits on new physics models . . . . .	145
9.4 Discussion of the results and prospects . . . . .	153
<b>Conclusion</b>	<b>158</b>
<b>A Special relativity and particle physics conventions</b>	<b>161</b>
<b>B Validation of the <math>t\bar{t}</math> background estimation</b>	<b>165</b>
<b>C Comparison of jet <math>\rightarrow \tau</math> fakes in the <math>e\tau</math> and <math>\mu\tau</math> channels</b>	<b>179</b>
<b>Bibliography</b>	<b>181</b>
