Remerciements i

Résumé vii

Abstract ix

List of Figures xvi

List of Tables xvii

1 Introduction 1

1.1 Electricity supply chain evolution 1

1.2 Outline and Contributions 4

1.3 Optimization tools overview 7

1.3.1 Mathematical programming 7

1.3.2 Bi-level problem 10

1.3.3 Stochastic optimization 12

2 Literature Review 15

2.1 Distribution network 15

2.1.1 Network flow problems 16

2.1.2 Hop constrained problems 17

2.1.3 Hop constrained reformulations on layered graphs 18

2.2 Unit Commitment 21

2.2.1 Problem description 21

2.2.2 Deterministic MILP formulations 22

2.3 Deregulated Electricity Markets 28

2.3.1 General context 28

2.3.2 Generic formulation 32

2.4 Bidding in deregulated Electricity Markets 34

2.4.1 Price-taker formulation . . . 35
2.4.2 Price-maker formulation . . . 36

3 Production security **41**
3.1 Introduction . . . 41
3.2 Minimum margin problem . . . 42
3.2.1 Problem description . . . 42
3.2.2 Vertex formulation . . . 43
3.2.3 Layered Formulation . . . 45
3.2.4 Preprocessing of layered graphs . . . 49
3.2.5 Numerical results . . . 54
3.3 Extensions of the problem . . . 61
3.3.1 Distribution networks with hop losses . . . 61
3.3.2 Distance constrained model . . . 64
3.4 Conclusion . . . 66

4 Power generation in presence of micro-grids **67**
4.1 Introduction . . . 67
4.2 The problem . . . 68
4.3 MILP reformulations . . . 71
4.3.1 Heuristic reformulation . . . 72
4.3.2 Comparative exact formulation . . . 73
4.4 Stochastic extension of the model . . . 74
4.5 Case study based on thermal power unit-commitment . . . 75
4.5.1 Data . . . 75
4.5.2 Numerical results . . . 77
4.6 Conclusion . . . 82

5 Bidding in day-ahead markets under uncertainty **85**
5.1 Introduction . . . 85
5.2 Problem Description . . . 86
5.3 General properties . . . 88
5.3.1 Day-ahead spot price and bidding prices . . . 88
5.3.2 Bi-Level Formulation . . . 91
5.3.3 Complexity . . . 92
5.3.4 Constant demand generalization . . . 94
5.4 Dynamic programming approach for SBP . . . 95
5.5 Variants of SBP solved by dynamic programming . . . 100

5.5.1 Upper bound . . . 100
5.5.2 Bidding with fixed quantities . . . 104
5.5.3 Bidding single-price generators . . . 106
5.5.4 Bidding with 2 generators . . . 109
5.5.5 Heuristic searching a Bertrand and Cournot equilibrium . . . 110
5.6 Numerical results . . . 112
5.6.1 Instances . . . 113
5.6.2 Optimality Gap . . . 113
5.6.3 Scenario and generator influence . . . 115
5.7 Conclusion . . . 116

6 Bidding in Price Coupled Regions **119**
6.1 Introduction . . . 119
6.2 Problem definition . . . 121
6.2.1 Unit commitment model . . . 122
6.2.2 Market equilibrium problem . . . 122
6.2.3 Market equilibrium constraints . . . 127
6.3 MILP reformulation . . . 131
6.4 Price elimination . . . 133
6.5 Bidding at marginal costs . . . 135
6.6 Heuristic methods . . . 136
6.6.1 Iterative price-taker algorithm . . . 136
6.6.2 Iterative Aggregation Disaggregation algorithm . . . 137
6.6.3 SOS-narrowing . . . 141
6.7 Numerical results . . . 142
6.7.1 Data . . . 143
6.7.2 Exact formulations for BPUC . . . 144
6.7.3 Heuristic methods . . . 148
6.7.4 Market impact . . . 150
6.8 Conclusion . . . 155

7 Conclusions **157**

Bibliography **161**

A Unit commitment **171**
A.1 Formulation UC1 . . . 171
A.2 Formulation UC2 . . . 173

B Micro-grid internal management **177**

C Bidding in Price Coupled Regions **181**

C.1 BPUC-MILP formulation 181

C.2 BPUC^M-MILP formulation 183

C.3 BPUC-$\{N\}$ formulation 183
