FACULTÉ DE MÉDECINE

UNIVERSITÉ LIBRE DE BRUXELLES

Involvement of High Mobility Group Box 1 protein in acetaminophen-induced liver injury : dissection of signaling pathways and potential therapeutic targeting.

Thesis submitted by Charlotte MINSART
in fulfilment of the requirements of the PhD Degree in "Docteur en Sciences Biomédicales et Pharmaceutiques"
Academic year 2020-2021

Supervisor: Pr Thierry Gustot
Co-supervisor: Pr Jacques Devière
Laboratoire de Gastro-entérologie Expérimentale

Thesis jury:

Pr Alain LE MOINE (President)
Pr Thierry GUSTOT (Supervisor and Secretary)
Pr Jacques DEVIERE (Co-supervisor)
Pr Véronique FLAMAND
Pr Philippe GOYENS
Pr Jean-Yves SPRINGAEL

Pr Nicolas LANTHIER (Université Catholique de Louvain)
Pr Abdellah MANSOURI (Université Paris Diderot)

Table of contents

Abbreviations ---- 9

General Introduction ---- 11

1. Acetaminophen ---- 12

1.1 Acetaminophen : history ---- 12

1.2 Acetaminophen: first overdose reports ---- 13

1.3 Acetaminophen overdose : Epidemiology ---- 14

1.4 Acetaminophen-induced hepatotoxicity ---- 16

1.4.1 APAP-adducts ---- 17

1.4.2 Mitochondrial dysfunction ---- 18

1.4.3 Hepatocyte death ---- 19

1.4.4 Inflammatory response ---- 22

1.4.5 Damage-Associated Molecular Pattern's (DAMPs) ---- 24

1.4.5.1 DAMPs and inflammasome activation ---- 26

1.4.5.2 DAMPs and inflammatory response ---- 25

1.5 Treatments and limitations ---- 28

2. High Mobility Group Box 1 protein ---- 30

2.1 Discovery ---- 30

2.2 Properties ---- 30

2.3 Structure ---- 31

2.4 Nuclear functions ---- 32

2.5 Post-translational modifications ---- 33

2.6 Extracellular functions ---- 34

2.7 HMGB1 as inflammatory DAMP ---- 36

2.7.1 Receptors mediating HMGB1 activity ---- 37

2.7.2 Redox state and cytokine activity of HMGB1 ---- 39

3. Role of HMGB1 in acetaminophen hepatotoxicity ---- 41

3.1 HMGB1 and liver injury ---- 41

3.1.1 HMGB1 as biomarker of APAP-induced liver injury ---- 41

3.1.2 HMGB1 inhibitors ---- 41

3.1.3 HMGB1 and inflammasome ---- 42

3.2 HMGB1 and liver repair ---- 43

4. Aims of the project ---- 44

Results ---- 45

1. Role of HMGB1 in a murine model of APAP-induced liver injury ---- 46

1.1 Introduction ---- 46

1.2 Materials and methods ---- 47

1.3 Results ---- 51

1.3.1 Murine model of APAP-induced liver injury ---- 51

1.3.2 Inflammatory cytokines and APAP-induced liver injury ---- 51
1.3.3 Release of HMGB1 during APAP-induced liver injury ---- 52
1.3.4 Glycyrrhizin protects mice against APAP hepatotoxicity ---- 53
1.3.5 Hepatic expression of HMGB1 receptors during APAP-induced liver injury ---- 55
1.3.6 APAP-induced liver injury is exacerbated in absence of Kupffer cells ---- 56
1.3.7 Absence of neutrophil recruitment during APAP-induced liver injury ---- 58
1.3.8 APAP-induced liver injury is exacerbated in TLR4-deficient mice ---- 59
1.4 Key findings ---- 61
2. HMGB1-driven feed-forward hepatocyte TLR4/TRIF/RIPK3-dependent necrosis circuit in acetaminophen-induced liver injury ---- 63
2.1 Introduction ---- 63
2.2 Materials and methods ---- 64
2.3 Results ---- 68
2.3.1 HMGB1 is released by APAP-damaged hepatocytes ---- 68
2.3.2 HMGB1 amplifies by itself APAP-induced hepatocyte death ---- 69
2.3.3 HMGB1 and APAP induce hepatocytes necroptosis by RIPK3-dependent pathway ---- 73
2.3.4 Implication of proteins mediated necroptosis signaling downstream of RIPK3 ---- 78
2.3.6 Contribution of the TLR3/4 adaptor TRIF to APAP-induced hepatocyte injury ---- 83
2.3.7 HepaRG cells and HMGB1 receptors ---- 84
2.3.8 TLR4 blockade protects HepaRG cell death induced by rhHMGB1 and APAP ---- 85
2.3.9 CYP3A4 and CYP2E1 activity were not influenced by drugs used in our experiments ---- 86
2.4 Key findings ---- 88
3. Combination of glycyrrhizin and N-acetylcysteine: benefit outcome in a murine model of acetaminophen-induced liver failure ---- 90
3.1 Introduction ---- 90
3.2 Materials and Methods ---- 91
3.3 Results ---- 94
3.3.1 Administration of GL, at the same time as APAP, reduces the severity of liver injury ---- 94
3.3.2 Administration of NAC/GL combination, at the same time as APAP, reduces the severity of liver injury as well as GL or NAC alone ---- 95
3.3.3 Delayed administration of NAC/GL combination reduces APAP-induced hepatocytes necrosis compared to GL or NAC alone ---- 98
3.3.4 Delayed administration of NAC/GL combination increases mice survival following APAP-induced liver injury compared to GL or NAC alone ---- 101
3.3.5 Protective effects of the NAC/GL combination do not result from inhibition of hepatic expression of CYP2E1 ---- 102
3.3.6 Protective effects of the NAC/GL combination are not gender-dependent ---- 103
3.4 Key Findings ---- 105
Discussion ---- 106
1. Role of HMGB1 in a murine model of APAP-induced liver injury ---- 107
2. HMGB1-driven feed-forward hepatocyte TLR4/TRIF/RIPK3-dependent necrosis circuit in acetaminophen-induced liver injury ---- 109
3. Combination of glycyrrhizin and N-acetylcysteine: benefit outcome in a murine model of acetaminophen-induced liver failure ---- 111

General conclusion ---- **113**
Perspectives ---- **115**
1.HMGB1 silencing ---- **116**
2. HMGB1 and post-translational states ---- **118**
3. HMGB1 likes company ---- **120**
4. TLR4: deleterious or protective role? ---- **121**
References ---- **122**
Appendix ---- **143**
Annex A: List and sequences of primers used for PCR analysis ---- **144**
Annex B: Criteria used for evaluation of necrosis score ---- **146**
Annex C: List of publications ---- **147**
1. Publications related to this thesis ---- 147
1.1 Peer-reviewed journal articles ---- 147
1.2 Peer-reviewed conference abstracts ---- 147
2. Publications unrelated to this thesis ---- 148
Peer-reviewed journal articles ---- 148
