UNIVERSITÉ LIBRE DE BRUXELLES

Effect of the Boundary Conditions Applied to the Liquid Bridge on the Liquid Transfer between Two Solid Surfaces

Thesis presented by TOURTIT Youness

with a view to obtaining the PhD Degree in Engineering Sciences and Technology

(ULB - "Docteur en Sciences de l'Ingénieur et Technologie")

(ULiège - "Docteur en Sciences de l'Ingénieur (aérospatiale et mécanique)")

Academic year 2020-2021

Supervisor : Professor Pierre LAMBERT

[TIPs Department]

Co-supervisor : Professor Tristan GILET

[Microfluidics Lab]

Thesis jury :

Prof. Pierre LAMBERT (Université libre de Bruxelles, Supervisor)

Prof. Tristan GILET (Université de Liège, Co-supervisor)

Prof. Pierre COLINET (Université libre de Bruxelles, Chair)

Prof. Geoffroy LUMAY (Université de Liège)

Prof. Massimo MASTRANGELI (TU Delft)

Contents

List of Figures	ix
List of Tables	xvii
1 Context of the thesis	2
2 State of the art	4
2.1 Introduction	4
2.2 Capillary adhesion at micrometer scales: in insects	6
2.2.1 Dry adhesion	8
2.2.2 Wet adhesion	8
2.3 Transfer of liquid between two solid surfaces	9
2.3.1 Effect of surface contact angle (SCA) on the liquid transfer	10
2.3.2 Effect of inertia on the liquid transfer	13
2.3.3 Effect of roughness, initial compression and fluid properties on the liquid transfer	13
2.3.4 Effect of the gravity on the liquid transfer	14
2.4 Stability of a liquid bridge between two solid surfaces	15
2.5 Conclusion	17
3 Materials and methods	20
3.1 Introduction	20
3.2 Requirements and design	20
3.3 Experiments	21
3.3.1 Experimental Protocol	21
3.3.2 Volume measurement of the water droplet	21
3.4 Fabrication and characterization of the employed surfaces	22
3.5 Fabrication and characterization of thin Polydimethylsiloxane (PDMS) membranes	25
3.6 Conclusion	28
4 Stability of a liquid bridge between two parallel planes	29
4.1 Introduction	29
4.2 Numerical simulation	30
4.2.1 Model development	30
4.2.2 The liquid bridge rupture	32
4.3 Molecular dynamic simulations	33
4.4 Experiments	35
4.5 Results and discussion	36

CONTENTS

4.5.1	At nanoscale: Comparison between YLE and Molecular Dynamic simulation results	36
4.5.2	At macroscale: Comparison between YLE and experimental results	38
4.6	Conclusion	40
5	Rupture of a Liquid Bridge between a Cone and a Plane	42
5.1	Introduction	42
5.2	Experimental Protocol	43
5.2.1	Variables and Parameters	43
5.3	Experimental Results	44
5.3.1	Phenomenology	44
5.3.2	Independence of the Transfer Ratio λ to Retraction Speed U in the Capillary Regime	44
5.3.3	Variation of λ and $h_{a,M}$ with α	46
5.3.4	Contact Line Pinning	47
5.4	Simplified Model	49
5.5	Effect of Barbules on λ	50
5.6	Barbules texture: a way for changing the contact conformity in a capillary context .	50
5.7	Conclusion	52
6	Liquid dispensing in the adhesive hairy pads of Green Dock Beetle <i>Gastrophysa viridula</i>	54
6.1	Introduction	54
6.2	Description of the experimental setup and the parameters investigated	58
6.2.1	Materials	58
6.2.2	Experimental setup	58
6.2.3	Investigated parameters and expected results	59
6.3	Results: footprints in forced walking	60
6.4	Biomimetic approach of the liquid dispensing system in insect adhesion	63
6.4.1	Design and description of the experimental setup	64
6.4.2	Phenomenology	67
6.4.3	Experimental results	67
6.5	Conclusion	73
7	General conclusion and perspectives	74
7.1	General conclusion	74
7.2	Perspectives	75
	Bibliography	77
	Appendices	89
	A List of Symbols	90
	B List of Publications	91
	B.1 Articles	91
	B.2 Proceedings	91
	C List of Contacts	92
