

FACULTÉ
DE PHARMACIE

UNIVERSITÉ LIBRE DE BRUXELLES

Study of drug cellular internalisation aspects: from macropinocytosis to improve cellular uptake to mesenchymal stem cells used as drug carriers

Thesis presented by Margaux COLIN

with a view to obtaining the PhD Degree in Pharmaceutical and Biomedical Sciences (“Docteur en Sciences biomédicales et pharmaceutiques”)

Academic year 2020-2021

Supervisor: Professor Véronique MATHIEU

Co-supervisor: Professor Pierre VAN ANTWERPEN

Thesis jury :

Caroline STEVIGNY (Université libre de Bruxelles, Chair)

Stéphanie POCHET (Université libre de Bruxelles, Secretary)

Hassan JIJAKLI (Université libre de Bruxelles)

Rémi ROSIERE (Université libre de Bruxelles ; InhaTarget Therapeutics)

Akeila BELLAHCENE (Université de Liège, GIGA, Cancer-Metastases Research Laboratory)

Christian JORGENSEN (Université de Montpellier, Institut de recherche de médecine régénératrice et de biothérapie)

Table of contents

Table of figures	1
Table of tables.....	4
Table of appendices.....	5
ABBREVIATIONS.....	7
RÉSUMÉ.....	11
SUMMARY	14
GENERAL INTRODUCTION	16
1. Drug delivery systems	16
1.1 Drug delivery systems concept	16
1.2 Cellular or cell-derived drug carriers	18
1.3 Intracellular internalisation processes	20
2. Cancers	25
2.1 General introduction and epidemiology	25
2.2 General information on cancer cell biology and glioma in particular	27
2.3 Glioma classification	29
2.4 Glioma treatment and multi-drug resistance	31
3. Stem cells	35
3.1 General introduction to stem cells	35
3.2 Mesenchymal stromal / stem cells (MSCs)	38
3.2.1 History and definition	38
3.2.2 Properties	39
3.2.3 Uses in therapeutic	46
4. Osteoarthritis in horses	50
4.1 Physiopathology	50
4.2 Diagnosis	53
4.3 Treatment	53
5. Curcumin	55
5.1 History, properties and chemistry	55
5.2 NDS27	59
AIM OF THE WORK.....	63
PART 1: Use of macropinocytosis to increase drug delivery in oncology	64
1. Introduction	64
2. Materials and methods	67
2.1 Materials	67

2.2	Cell lines	67
2.3	MTT colorimetric assay.....	68
2.4	Characterisation of vacuoles	69
2.4.1	Phase contrast microscopy for morphological observations	69
2.4.2	Fluorescent microscopy assays	69
2.4.3	Flow cytometry.....	69
2.5	Quantification of intracellular temozolomide.....	70
2.5.1	Sample preparation.....	70
2.5.2	LC-MS process, data acquisition, and analysis	70
2.6	Evaluation of intracellular doxorubicin by flow cytometry	71
2.7	Statistical analysis	72
3.	Results	73
3.1	Evaluation of the deregulation of macropinocytosis in human gliomas.....	73
3.2	Morphological comparison of glioma cells treated with MOMIPP, Vacquinol-1 and Honokiol	77
3.3	Characterisation of the vacuoles induced by MOMIPP, Vacquinol-1 and Honokiol in glioma cells	81
3.4	Evaluation of the effects of Honokiol, Vacquinol-1 and MOMIPP on intracellular drugs concentration.....	88
4.	Discussion.....	90
5.	Conclusions	94
	PART 2: Use of mdMSCs for drug delivery	95
	PART 2A: Use of macropinocytosis to increase mdMSCs drug loading	95
1.	Introduction.....	95
2.	Materials and methods.....	96
2.1	Materials.....	96
2.2	Cell lines	96
2.3	Population doubling time	97
2.4	MTT colorimetric assay.....	97
2.5	Characterisation of vacuoles	97
2.5.1	Phase contrast and fluorescent microscopy assays.....	97
2.5.2	Flow cytometry.....	98
2.6	Evaluation of intracellular doxorubicin by flow cytometry	98
2.7	Statistical analysis	98
3.	Results	99
3.1	Characteristics of equine skeletal muscle-derived MSCs used.....	99
3.2	Response of equine mdMSCs to vacuolisation inducers in comparison to glioma cells	100

3.3	Demonstration of improved drug loading	104
4.	Discussion	106
5.	Conclusions	108
PART 2B: Loading of mdMSCs with curcumin for the treatment of osteoarthritis in horses		109
1.	Introduction	109
2.	Materials and methods	111
2.1	Materials	111
2.2	Cell lines	111
2.3	Quantitative videomicroscopy	111
2.4	Quantification of intracellular curcumin	112
2.4.1	Sample preparation	112
2.4.2	HPLC-UV process, data acquisition, and analysis	112
2.5	Viability and proliferation assays	113
2.5.1	MTT colorimetric assay	114
2.5.2	Sulforhodamine B and crystal violet assays	114
2.6	Evaluation of total reactive oxygen and nitrogen species (ROS/RNS), and mitochondrial ROS	115
2.7	Mitochondrial membrane potential ($\Delta\Psi_m$)	117
2.8	Cellular adhesion capacity	118
2.9	Cellular invasion capacity	118
2.10	Expression of stemness markers	120
2.11	Statistical analysis	121
3.	Results	122
5.1	Evaluation of <i>in vitro</i> toxicity of NDS27 on mdMSCs	122
5.2	Evaluation of the intracellular penetration of curcumin	123
5.3	Characterisation of loaded equine mdMSCs	127
5.3.1	Redox status evaluation and mitochondrial functions	127
5.3.2	Effects of curcumin loading on cellular mesenchymal stem cells properties	131
4.	Discussion	138
5.	Conclusions	144
