

# **MOLECULAR TAXONOMY, PHYLOGENY AND BIOGEOGRAPHY OF EUROPEAN NIPHARGIDS (CRUSTACEA, AMPHIPODA)**

Thesis submitted by Fabio STOCH

In fulfilment of the requirements of the PhD Degree in science (ULB - “Docteur en Science”)

Academic year 2020-2021

## **TABLE OF CONTENTS**

### **INTRODUCTION**

#### **GENERAL INTRODUCTION**

Groundwaters and stygobionts

Groundwater ecosystems

Biodiversity in groundwaters

#### **THE FAMILY NIPHARGIDAE**

Origin, distribution, and taxonomic position within Amphipoda

Classification of Niphargidae

#### **IMPEDIMENTS AND SHORTFALLS IN NIPHARGID RESEARCH**

Niphargid taxonomy, phylogeny, and biogeography: impediments and shortfalls

The taxonomic impediment

The Racovitza impediment

The Linnean shortfall: most species are undescribed

The Darwinian shortfall: species phylogeny is poorly known

The Wallacean shortfall: species distribution is poorly known

Overcoming the taxonomic and the Racovitza impediments

#### **RESEARCH OBJECTIVES AND THESIS STRUCTURE**

Research objectives

Thesis structure

### **CHAPTER 1 - DO CRYPTIC SPECIES MATTER IN MACROECOLOGY?**

### **CHAPTER 2 - THE GENUS *MICRONIPHARGUS***

### **CHAPTER 3 - HOW DID SUBTERRANEAN AMPHIPODS CROSS THE ADRIATIC SEA?**

### **CHAPTER 4 - MOLECULAR TAXONOMY, PHYLOGENY AND BIOGEOGRAPHY OF THE *NIPHARGUS TATRENSIS* SPECIES COMPLEX**

### **DISCUSSION & PERSPECTIVES**

General discussion

Detailed discussion of the results reported in the previous chapters

Perspectives

### **APPENDIX**

Published papers

Abstracts of oral communications

### **REFERENCES**
