

Abstract	i
Abbreviations	vii
Chapter 1 Introduction	1
1.1 Function of oxygen in living organisms	1
1.2 Adaptation of animal life to variable environmental oxygen concentrations	1
1.3 Concept of hypoxia	3
1.3.1 Environmental hypoxia	4
1.3.2 Functional hypoxia	4
1.4 Systemic response to hypoxia	6
1.4.1 Increasing oxygen supply	6
1.4.2 Decreasing oxygen demand	6
1.5 Cellular response to hypoxia	8
1.5.1 Increasing metabolic enzyme activity in hypoxia	8
1.5.2 Switch from aerobic to anaerobic metabolism	10
1.5.3 Inhibition of ATP-dependent ion pumping by hypoxia	12
1.5.4 Translation in eukaryotic cells	14
1.5.5 Global translation inhibition under cellular hypoxic condition	17
1.5.6 Transcriptional regulation of gene expression by hypoxia inducible factors (HIF)	24
1.5.7 HIF regulation	24
1.5.8 Families of HIF factors	26
1.5.9 The evolution of HIFs and HIF components	28
1.5.10 Conservation of HIFs and HIF components	28
1.5.11 HIF therapeutics	30
1.5.12 HIF-independent transcriptional regulation in hypoxia	32
1.6 Mechanisms of translation under hypoxia	36
1.6.1 Function of uORE, 5'-TOP and IRES and in specific 5'UTR mediated translation under hypoxia	36
1.6.2 Influence of 3'UTR on translation	38
1.6.3 Role of 3'UTR binding proteins	38
1.6.4 Function of 3'UTR localized sequences in specific mRNA translation under hypoxia	39
1.7 Hypoxia in invertebrates	41
1.7.1 Variable environmental oxygen concentrations in invertebrates	41
1.7.2 Oxygen delivery system in invertebrates	41
1.7.3 HIFs in invertebrates	43
1.7.4 <i>Drosophila melanogaster</i> as a model to study translational control in hypoxia	44
1.7.5 Life cycle of <i>Drosophila melanogaster</i>	46
Chapter 2 Objectives	48
2.1 Characterize general features of transcripts induced by hypoxia	48
2.2 Investigate the molecular mechanisms of translational control under hypoxia in <i>Drosophila melanogaster</i>	48
2.3 Identification of initiation factors required for translation in hypoxia	49
2.4 Identification of RNA-binding proteins involved in hypoxia translation	49
Chapter 3 Results	51

<u>3.1 Translation of hypoxia-induced mRNAs in <i>Drosophila</i></u>	51
<u>3.1.1 Identification of upregulated mRNAs under hypoxia in S2 cells</u>	53
<u>3.1.2 Translation of mRNAs candidates under hypoxia</u>	55
<u>3.1.3 Candidates genes are translated in a 3'UTR dependent manner</u>	57
<u>3.1.4 "CA-rich" motif is essential for 3'UTR mediated translation in hypoxia</u> ..	57
<u>3.1.5 "CA-rich" motifs in 3'UTRs of candidate genes are sufficient to induce polysomes formation on a reporter mRNA</u>	59
<u>3.1.6 Adenosines in "CA-rich" motifs play a key role in the expression of reporter gene under hypoxia</u>	59
<u>3.1.7 3'UTR CA-rich motifs are enriched in subsets of hypoxia induced mRNA</u>	61
<u>3.2 4EHP drives the translation under hypoxia</u>	64
<u>3.2.1 <i>Drosophila</i> initiation factor</u>	66
<u>3.2.2 Expression of eIF4E family genes in S2 cells under hypoxia</u>	66
<u>3.2.3 4EHP is necessary for the production of LDH under hypoxia</u>	68
<u>3.2.4 Reduced accumulation of candidate mRNAs in polysomes of <i>4ehp</i> KO cells in hypoxia</u>	70
<u>3.2.5 4EHP is required for the efficient 3'UTR-mediated translation of mRNA under hypoxia</u>	70
<u>3.2.6 4EHP protein is recruited to polysome fractions under hypoxia</u>	75
<u>3.2.7 4EHP represses global translation under hypoxia in S2 cells</u>	75
<u>3.2.8 4EHP is required for <i>Drosophila melanogaster</i> development in a hypoxic environment</u>	78
<u>3.3 Investigating the potential binding of <i>Drosophila</i> LARK to the 3'UTR of Ldh mRNA under hypoxia</u>	80
<u>3.3.1 Long-term inactivation of Lark is lethal to S2 cells</u>	80
<u>3.3.2 Inactivation of LARK reduces LDH synthesis in hypoxic <i>Drosophila</i> S2 cells</u>	82
<u>3.3.3 Localization of LARK and 4EHP in 293T cells</u>	82
<u>3.3.4 Proteins LARK and 4EHP are partially recruited to polysomal fractions in <i>Drosophila</i> S2 cells</u>	84
<u>3.3.5 Investigating the potential interaction of LARK and 4EHP</u>	84
<u>3.3.6 Identification of factors binding to Ldh and Sirup 3'UTR under hypoxia</u> ..	86
<u>3.3.7 Investigating the possible binding of LARK to the Ldh mRNA 3'UTR</u>	86
<u>Chapter 4 Conclusions, Discussion and Perspectives</u>	89
<u>4.1 Conclusions</u>	89
<u>4.2 Discussion and Perspectives</u>	89
<u>Chapter 5. Methods and Materials</u>	101
<u>5.1 Reagents and instruments</u>	101
<u>5.2 Cells culture and treatment</u>	102
<u>5.3 Fly strains and maintenance</u>	102
<u>5.4 Construction of stable cell lines</u>	105
<u>5.5 Generation of 4EHP antibody</u>	105
<u>5.6 Sucrose density gradient polysome analysis</u>	106
<u>5.7 RNA and protein extraction</u>	106
<u>5.8 Northern blot and RT-qPCR</u>	107
<u>5.9 RNA interference</u>	107
<u>5.10 Western blot</u>	108

5.11 Dual luciferase assay	109
5.12 Inhibition of protein synthesis (Puromycin labelling)	109
5.13 Co-immunoprecipitation	111
5.14 EMSA	111
5.14 Surveyor nuclease assay	112
5.16 Bioinformatic analysis	112
5.17 Secondary structure of Ldh 3'UTR	113
5.18 Immunofluorescence	113
5.19 Establishment of 4ehp rescue stable cell line	114
5.20 Statistics and graphs	114
Funding and support	114
Appendix	115
