1	Introduction	1
I	D-Branes at Singularities	9
2	Supersymmetric Gauge Theories	11
2.1	Elements of supersymmetry	12
2.1.1	Matter, interactions and the moduli space	12
2.1.2	Renormalization and superconformal theories	15
2.2	SQCD and Seiberg duality	17
2.2.1	Setting the stage for SQCD	17
2.2.2	The quantum moduli space of SQCD	18
2.3	Dynamical supersymmetry breaking	21
2.3.1	The $SU(5)$ model	21
2.3.2	The 3–2 model	24
3	String Theory	27
3.1	Elements of string theory	29
3.1.1	Perturbative approach to types IIA and IIB	29
3.1.2	Branes	33
3.1.3	T-duality	39
3.2	AdS-CFT correspondence	40

4	String Geometry	45
4.1	Calabi-Yau cones	46
4.1.1	Preserving supersymmetry	46
4.1.2	Conical singularities	48
4.2	Toric varieties	50
4.2.1	Fans and cones	50
4.2.2	The Calabi-Yau and non-compactness conditions . . .	55
4.2.3	Dual cones and ring of coordinates	57
4.2.4	Cycles and (p, q) -web	60
5	Quivers and Fractional Branes	65
5.1	Orbifolds of flat space	66
5.1.1	A first encounter with quivers	66
5.1.2	$\mathcal{N} = 2$ fractional branes	69
5.2	The conifold and cascading gauge theories	71
5.2.1	The Klebanov-Witten model	71
5.2.2	Deformation branes	74
5.3	Symmetries and anomalies	79
6	Branes and Dimers	85
6.1	Brane tiling	85
6.2	Dimer models	92
6.2.1	Conformality on the graph	92
6.2.2	From dimers to the geometry	93
6.2.3	Zig-Zag paths	97
6.2.4	Partial resolutions	99
6.3	Fractional branes revisited	99
6.3.1	Anomalies and zig-zag paths	99
6.3.2	Classification of fractional branes	104

II	Orientifolds in Dimer Models	109
7	Orientifolds	111
7.1	Orientifolds from the worldsheet	111
7.1.1	Orientifolds and supersymmetry	111
7.1.2	Orientifold charge and tension	112
7.1.3	Orientifolded open string sector	114
7.1.4	Fractional branes and orientifolds	116
7.2	Fixed points and lines in dimer models	118
8	Anomalies	123
8.1	Anomaly cancellation conditions in orientifolds	124
8.1.1	The adjacency matrix of orientifolded theories	125
8.1.2	The homogeneous problem	127
8.1.3	The non-homogeneous problem	128
8.2	A zig-zag algorithm for orientifolds	131
8.2.1	Fixed line(s) orientifolds	132
8.2.2	Fixed points orientifolds	141
8.3	General criteria for anomaly-free orientifolds	145
8.3.1	Diagonal line orientifolds	145
8.3.2	Horizontal/Vertical lines orientifolds	153
8.3.3	Fixed points orientifolds	155
8.4	Conclusions	160
9	Dimers in a Bottle	163
9.1	Torus involutions	164
9.2	Glide orientifolds	165
9.2.1	Orbifold $\mathbb{C}^2/\mathbb{Z}_2$	165
9.2.2	More orbifold examples	169
9.2.3	Conifold-like singularities	170
9.2.4	General properties	172

9.3	T-duals of the glide orientifold	174
9.3.1	Type IIA picture and the brane tiling	174
9.3.2	The mirror picture	178
9.4	Involutions and zig-zag paths	181
9.4.1	Glide orientifold from the toric diagram	183
9.4.2	Fractional branes in glide orientifolds	185
9.5	Shift orientifolds	186
9.6	Conclusions	192
9.A	Worldsheet analysis for the Klein bottle projection of $\mathbb{C}^2/\mathbb{Z}_4$.	194
9.B	Computations for the orbifolds of the conifold	195
9.B.1	Orbifold of the conifold \mathcal{C}/\mathbb{Z}_2	195
9.B.2	Zeroth Hirzebruch surface F_0	196
9.B.3	A cascade in the glide projection of \mathcal{C}/\mathbb{Z}_2	197

III Dynamical Supersymmetry Breaking in Dimer Models **199**

10 Supersymmetry Breaking Vacua and their Coulomb Branch Instability **201**

10.1	Overview of the problematic	202
10.2	The $\mathbb{C}^3/\mathbb{Z}_{6'}$ singularity	206
10.3	The PdP ₄ singularity	214
10.4	Other supersymmetry breaking set-ups	219
10.4.1	del Pezzo singularities	219
10.4.2	Orbifolds of flat space	228
10.5	A no-go theorem and how to avoid it	237
10.6	Outlook	240

11 Stability of Supersymmetry Breaking Vacua in Dimer Models **241**

11.1	SU(5) models	242
------	------------------------	-----

11.1.1	Fixed points orientifolds	242
11.1.2	Fixed line(s) orientifolds	249
11.2	3–2 Models	254
11.2.1	General features	254
11.2.2	Fixed points orientifolds	257
11.2.3	Fixed line(s) orientifolds	260
11.2.4	Twin 3–2 models?	261
11.3	Outlook	263
11.A	Holes in the dimer and zig-zag paths	264
11.B	Anomaly cancellation conditions for 3–2 quivers	265
12	The Octagon	269
12.1	The rise of the Octagon	269
12.2	Dynamical supersymmetry breaking on the Octagon	274
12.2.1	The UV-complete model	274
12.2.2	Stability in the infrared	275
12.3	Conclusions	276
12.A	The Octagon and its symmetric phase	277
12.B	Partial resolutions of the Octagon	278
