Abstract	xi
List of publications	xii
Introduction	1
1 Aspects of Quantum Field Theory in three dimensions	5
1.1 Generalities on symmetries and anomalies	5
1.2 $U(1)$ Maxwell theory	8
1.3 Particle/vortex duality	11
1.3.1 Abelian Higgs model	11
1.3.2 $O(2)$ model	13
1.3.3 Dictionary and meaning of the duality	14
1.4 Abelian Chern-Simons theory	17
1.4.1 Anyons	18
1.4.2 $U(1)_1$ pure Chern-Simons theory	20
1.4.3 Abelian Maxwell Chern-Simons theory	21
1.5 Fermions in 2+1 dimensions	22
1.5.1 Fermion path integral and parity anomaly	24
1.6 Abelian dualities	27
1.6.1 $U(1)_1 + \phi \leftrightarrow U(1)_{-1} + \phi$	28
1.6.2 $U(1)_1 + \phi \leftrightarrow \psi$	30
1.6.3 $U(1)_{-\frac{1}{2}} + \psi \leftrightarrow \phi$	31
1.7 Non-abelian theories	33
1.7.1 Chern-Simons theory and level/rank dualities	33
1.7.2 Yang-Mills Chern-Simons theory	35
1.8 Aharony dualities	36
1.9 The phase diagram of QCD_3	38

1.9.1	Large N limit of QCD_3	41
1.10	Four-dimensional gauge theories	43
1.10.1	Yang-Mills domain walls	43
1.10.2	QCD domain walls	45
2	Aspects of large N and gauge/gravity duality	49
2.1	Generalities on the large N expansion	49
2.2	Large N vector models in three dimensions	51
2.2.1	The $O(N)$ model	52
2.2.2	The Gross-Neveu model	55
2.2.3	QED_3 with a large number of flavors	59
2.3	Large N expansion for $SU(N)$ gauge theories in four dimensions	61
2.4	Gauge/gravity duality	63
2.4.1	AdS/CFT correspondence	63
2.4.2	Towards non-conformal holography	67
3	Phase diagram of QCD_3 with broken flavor symmetry	71
3.1	$U(n)$ gauge theories coupled to f scalars	72
3.2	The two-dimensional phase diagram	74
3.3	Consistency checks and beyond	78
3.3.1	Asymptotic phases: matching ordinary QCD_3	78
3.3.2	$k = 0$: time reversal and Vafa-Witten theorem	80
3.3.3	Dual bosonic theories: matching the phase transitions	81
3.3.4	Perturbing σ via massive deformations	85
3.4	Comments and outlook	87
4	Holographic description of large N QCD_3	89
4.1	Summary of the brane construction for the QCD_3 vacua	90
4.2	Holographic description of QCD_3	96
4.2.1	Yang-Mills theory with a Chern-Simons term	96
4.2.2	Adding flavors in the holographic setup	98
4.3	Large N energetics of holographic QCD_3	106
4.3.1	Geometric structure of QCD_3 vacua	106
4.3.2	Phase diagram of holographic QCD_3	109
4.4	$1/N$ corrections	114
4.4.1	Phase diagram	115
4.5	Bosonization dualities from string theory	117
4.6	Comments and outlook	118

5	Holographic description of QCD₄ domain walls	121
5.1	The Sakai-Sugimoto model	122
5.2	Domain walls of pure Yang-Mills	125
5.3	Domain walls of massive QCD	128
5.3.1	Small quark mass regime	130
5.3.2	Large quark mass regime and the phase transition	133
5.4	Comments and outlook	136
6	Boundary construction of large N vector models in three dimensions	139
6.1	Large N scalars on the boundary	142
6.1.1	Dirichlet coupled to N free scalars	142
6.1.2	Neumann coupled to N critical scalars	145
6.1.3	Derivation of the duality	149
6.1.4	Adding a 4d gauge field	154
6.2	Large N fermions on the boundary	161
6.2.1	Neumann coupled to N free fermions	161
6.2.2	Dirichlet coupled to N critical fermions	163
6.2.3	Derivation of the duality	164
6.2.4	Adding a 4d gauge field	166
6.3	Comments and outlook	169
	Appendix A: Feynman rules	170
	Appendix B: Bosonic results with a bulk θ term	174
	Appendix C: Dimensional regularization	177
	Bibliography	181
