# Contents

**1 Introduction** **1**
- 1.1 Brain-inspired computing . . . 1
- 1.2 Artificial neural networks . . . 3
- 1.3 Reservoir computing . . . 6
- 1.4 Photonic reservoir computing . . . 8
- 1.5 Scope and motivation of this work . . . 11
  - 1.5.1 Introducing photonic liquid RC . . . 11
  - 1.5.2 Lugiato-Lefever Equation as inspiration . . . 11
  - 1.5.3 Objectives . . . 12
- 1.6 Formalism and tools . . . 13
  - 1.6.1 RC operation . . . 13
  - 1.6.2 RC training and testing . . . 14
  - 1.6.3 Benchmark tasks . . . 15
- 1.7 Thesis outline . . . 20

**2 Nonlinear diffusive RC** **27**
- 2.1 Introduction . . . 27
- 2.2 Nonlinear diffusive loop model . . . 28
  - 2.2.1 System equation . . . 28
- 2.3 Implementing a reservoir computer . . . 29
  - 2.3.1 Encoding neurons in the system's spatial extent . . . 29
  - 2.3.2 Coupling input data to the neurons . . . 29
- 2.4 Steady states and stability analysis . . . 30
  - 2.4.1 Steady states without diffusion and input . . . 30
  - 2.4.2 Steady states with diffusion, without input . . . 34
  - 2.4.3 Steady states with diffusion and input . . . 36
  - 2.4.4 Steady states with stationary non-homogeneous input . . . 38
- 2.5 Reservoir computing performance . . . 45
  - 2.5.1 Santa Fe time series prediction task . . . 46
  - 2.5.2 Computational capacity . . . 48
- 2.6 Summary and conclusions . . . 51

**3 Diffractive photonic RC** **53**
- 3.1 Introduction . . . 53
- 3.2 System description . . . 54
  - 3.2.1 Diffraction model . . . 56
  - 3.2.2 Stabilisation . . . 57

3.3 Implementing a reservoir computer . . . 58
3.3.1 Spatially multiplexed neurons . . . 58
3.3.2 Efficient simulation of propagation in the cavity . . . 58
3.3.3 SLM modelling . . . 60
3.3.4 Output layer . . . 61
3.4 Reservoir computing performance . . . 62
3.4.1 Diffractive coupling scheme . . . 62
3.4.2 RC performance trends . . . 64
3.5 Symmetries in the diffractive neural coupling . . . 67
3.5.1 Visualizing the supported symmetries . . . 67
3.5.2 Effects of symmetries on performance . . . 70
3.6 Summary and conclusions . . . 72

**4 Fiber-based RC** **77**
4.1 Introduction . . . 77
4.2 System description . . . 79
4.2.1 Schematic of the system . . . 79
4.2.2 Physical model . . . 81
4.2.3 Implementing a reservoir computing . . . 83
4.2.4 Balanced Mach-Zehnder modulator operation . . . 85
4.3 Reservoir computing performance . . . 86
4.4 Spatially distributed nonlinearity . . . 89
4.4.1 Numerical performance on time series prediction . . . 89
4.4.2 Experimental linear and nonlinear memory capacity . . . 91
4.5 Exploiting dispersion for interneural coupling . . . 96
4.6 Summary and conclusions . . . 98

**5 RC in unstable environments** **103**
5.1 Introduction . . . 103
5.2 Parameter fluctuations: effects and mitigation . . . 104
5.2.1 Simulating phase fluctuations . . . 105
5.2.2 Effects of phase fluctuations . . . 105
5.2.3 Training with varying phase . . . 106
5.2.4 Phase dependent output weights . . . 107
5.3 Supervised feature-based weight tuning . . . 109
5.3.1 Estimating the phase . . . 110
5.3.2 Output weights depending on estimated phase . . . 111
5.4 Feature based output expansion . . . 112
5.4.1 Feature based weight tuning . . . 112
5.4.2 Alternative perspective on the output expansion . . . 115
5.5 Unsupervised feature-based output expansion . . . 117
5.5.1 Random features . . . 118
5.5.2 Memory capacity . . . 121
5.5.3 Nonlinear channel equalization task . . . 123
5.6 Summary and conclusions . . . 126

**6 Speckle based telecom & computing** **131**
6.1 Introduction . . . 131

6.2 Speckle: a useful nuisance . . . . . 132
6.2.1 Speckle characteristics in MMFs . . . . . 132
6.2.2 Speckle-based photonic processing . . . . . 134
6.3 Exploiting quasi-static speckle for SDM . . . . . 135
6.3.1 Introduction to SDM in optical telecommunication . . . 135
6.3.2 A novel speckle-based SDM scheme . . . . . 137
6.3.3 Input differentiation with bulk optics . . . . . 140
6.3.4 Bulk optics SDM demonstration . . . . . 143
6.3.5 Transition to fiber-based input and output coupling . . 149
6.3.6 Fiber-based SDM demonstration . . . . . 151
6.4 Exploiting dynamic speckle for photonic processing . . . . . 154
6.4.1 A novel MMF-based neuromorphic computer . . . . . 155
6.4.2 ESN-based dispersive fiber model . . . . . 156
6.4.3 Demonstrating memory capacity . . . . . 157
6.4.4 Demonstrating pattern recognition . . . . . 159
6.4.5 Demonstrating dispersion compensation . . . . . 160
6.5 Summary and conclusions . . . . . 165

**7 Conclusion and outlook** **171**
7.1 Summary and conclusions . . . . . 171
7.2 Future perspectives . . . . . 174
7.3 Closing remarks . . . . . 176

**Appendix A Integrating LLE-like equations** **181**

**Appendix B Diffractive cavity simulation** **183**

**Appendix C Slow feature expansion** **187**

**Appendix D Speckle cross-correlations** **189**
