

Table of Contents

Remerciements / Acknowledgements	i
Abstract	iii
Résumé	v
Table of Figures.....	xiii
List of Tables	xvii
Abbreviations and acronyms.....	xix
Chapter 1 Introduction	1
1. Antibacterial resistance.....	3
1.1. Antibiotics	3
1.2. Global threat of antibiotic resistance	5
1.3. Methicillin-resistant <i>Staphylococcus aureus</i>	8
1.4. Carbapenem-resistant <i>Acinetobacter baumannii</i>	15
2. Current need for new antibiotics	22
3. Pharmaceutical potential of the marine sponge holobiont	24
3.1. The marine sponge holobiont	24
3.2. Sponge-associated bacteria	26
3.3. Marine sponge natural products.....	31
3.4. Antibacterial compounds produced by sponge-associated bacteria	32
4. Thesis plan and objectives.....	35
4.1. <i>Vagococcus fluvialis</i>	35
4.2. Objectives.....	35
Chapter 2 Bacteria associated to the sponges <i>Hymeniacidon perlevis</i> and <i>Halichondria panicea</i>: isolation and antibacterial activity against multi-drug resistant <i>Staphylococcus aureus</i>	37
1. Context.....	39
2. Abstract	43
3. Introduction.....	43

4.	Materials and method	45
4.1.	Sponge sampling.....	45
4.2.	Isolation of sponge-associated bacteria.....	45
4.3.	Sequencing of the 16S rRNA gene of bacterial isolates.....	46
4.4.	Hospital-isolated <i>Staphylococcus aureus</i> strains and antibiotic susceptibility testing 47	
4.5.	Assay for antibacterial activity.....	48
5.	Results	49
5.1.	Phylogenetic affiliation of the bacterial strains and phylogenetic tree.....	49
5.2.	Antibacterial activity against <i>Staphylococcus aureus</i> and <i>Pseudomonas aeruginosa</i> 53	
5.3.	Antibacterial activity against multi-drug resistant <i>Staphylococcus aureus</i> strains .	54
6.	Discussion	56
7.	Acknowledgements.....	59
8.	Conflict of Interest.....	59
9.	Authors contribution.....	59
10.	Supporting information	60

Chapter 3 Bactericidal effect of sponge-isolated bacteria against carbapenem-resistant *Acinetobacter baumannii* strains71

1.	Context.....	73
2.	Abstract.....	77
3.	Introduction.....	77
4.	Methods.....	78
4.1.	Bacterial strains and culture media.....	78
4.2.	Agar overlay assay for the detection of antibacterial activity.....	79
4.3.	Co-cultivation challenge.....	79
4.4.	Statistical analysis	81
5.	Results	81
5.1.	Agar overlay assays for the detection of antibacterial activity	81

5.2.	Phylogenetic analysis of inhibitory strains	81
5.3.	Co-cultivation challenge using liquid media	82
6.	Discussion	83
7.	Conclusion.....	84
8.	Data availability	85
9.	Acknowledgements.....	85
10.	Author contributions	85
11.	Additional information.....	85
12.	Supplementary material	86

Chapter 4 Characterization of the antibacterial compound(s) produced by sponge-isolated *Vagococcus fluvialis* strains.....89

1.	Context.....	91
2.	Abstract	95
3.	Introduction.....	95
4.	Materials and methods	97
4.1.	Agar overlay assay modifications.....	97
4.2.	Co-cultivation challenge.....	97
4.3.	Scanning electron microscopy of inhibition zones in the agar overlay assay	98
4.4.	Culture fractionation and cell lysis.....	98
4.5.	Surface protein shaving	98
4.6.	SDS-PAGE and Native PAGE electrophoresis	99
4.7.	Extraction by organic solvents	100
4.8.	Extraction with resins.....	101
4.9.	Preparation of electrocompetent cells	101
4.10.	Antibiotic susceptibility testing.....	103
4.11.	Plasmid DNA isolation.....	103
4.12.	Transformation by electroporation	103
5.	Results	104
5.1.	Agar overlay modifications.....	104

5.2.	Co-cultivation challenge.....	104
5.3.	Scanning electron microscopy	104
5.4.	Culture fractionation and cell lysis.....	106
5.5.	Surface protein shaving	106
5.6.	SDS-PAGE and Native PAGE electrophoresis	106
5.7.	Extraction by organic solvents	107
5.8.	Extract with resins	107
5.9.	Transformation of cells by electroporation	107
6.	Discussion	108
7.	Supplementary material	111

Chapter 5 Genome analysis of the sponge-isolated *Vagococcus fluvialis* strains.....113

1.	Context.....	115
2.	Abstract	121
3.	Impact statement	121
4.	Data summary	122
5.	Introduction.....	122
6.	Materials and method	123
6.1.	Bacterial strains.....	123
6.2.	Genome sequencing.....	123
6.3.	Genome assembly and quality assessment.....	124
6.4.	Annotation	124
6.5.	Functional profiling of the Enterococcaceae family	125
6.6.	Comparative genome analysis.....	125
6.7.	Phylogenetic trees	126
6.8.	MGE abundance comparison	126
7.	Results	127
7.1.	Assembly and general characteristics of the <i>V. fluvialis</i> genomes.....	127
7.2.	Comparative genome analysis of <i>Vagococcus fluvialis</i>	128

7.3. Characterization of MGEs and their abundance.....	132
8. Discussion	137
9. Author statements.....	140
9.1. Authors and contributors.....	140
9.2. Conflicts of interest	140
9.3. Funding information.....	140
9. Supplementary information	141
Chapter 6 Discussion and perspectives	163
1. The exceptional antibacterial potential of bacteria isolated from the sponges <i>Hymeniacidon perlevis</i> and <i>Halichondria panicea</i>	165
2. The strategic choice to focus on <i>Vagococcus fluvialis</i>	167
3. The mystery of the antibacterial compound(s) produced by the <i>V. fluvialis</i> strains	168
4. Challenges of working with non-model organisms	170
5. Limitations and perspectives.....	170
