

CONTENTS

1 ANTARCTICA AND SEA LEVEL	1
1.1 Introduction	1
1.2 The Antarctic ice sheet and its contribution to sea-level changes	4
1.2.1 How does the Antarctic ice sheet contribute to sea-level changes?	4
1.2.1.1 The ice-sheet mass balance	4
1.2.1.2 The Antarctic ice shelves – sources of feedbacks	5
1.2.2 The present: current trends in Antarctic ice mass changes	7
1.2.3 An uncertain future: the Antarctic ice sheet in a changing climate	9
1.2.3.1 The contributors to the uncertainty	10
1.2.3.1.1 The instability mechanisms in marine ice sheets	10
1.2.3.1.2 Ice–ocean interactions	13
1.2.3.1.3 Ice–atmosphere interactions	15
1.2.3.1.4 A stabilising aspect: interactions with the solid Earth and the local sea level via glacial isostatic adjustment	17
1.2.3.1.5 Ice sheet processes: uncertainties in substrate conditions and ice rheology	20
1.2.3.2 Future projections: what can we expect?	21
1.2.3.3 Summary	23
1.3 Physically-based models of Antarctic mass change	24
1.3.1 Ice-sheet models	24
1.3.2 The main challenges in modelling the Antarctic ice sheet	25
1.3.2.1 Paradigm shift in ice sheet modelling: the challenge of modelling grounding-line migrations	25
1.3.2.2 Basal sliding	26
1.3.2.3 Model initialisation	26
1.3.2.4 Simulating the ice-sheet interactions with its boundaries	27
1.3.2.4.1 Ocean and atmosphere: coupling with climate models	27
1.3.2.4.2 Solid Earth and relative sea-level: solving the Sea Level Equation	29
1.4 Thesis objectives and outline	31
2 METHODS	33

2.1	How to produce credible projections of ice sheet contribution to sea level: large ensemble modelling and uncertainty quantification	33
2.1.1	Quantifying uncertainties	34
2.1.2	Conditioning simulations on observations	38
2.1.3	UQ probabilistic framework applied in this thesis	39
2.2	Our tool: the fast Elementary Thermomechanical Ice Sheet model	40
2.2.1	An elementary ice-sheet model	40
2.2.2	Interactions with the Earth system	41
2.2.3	Input data	43
2.2.4	Model initialisation	45
2.2.5	Model verification and validation	45
2.3	The hidden part of the iceberg: contributions to the development of the ice-sheet model f.ETISH	48
2.3.1	Improvement of the initialisation procedure	48
2.3.2	Development of an Elementary GIA model	52
2.3.3	Implementation of an improved PDD-based melt-and-runoff model	53
2.3.3.1	Melt model	54
2.3.3.2	The treatment of melt water retention and refreezing	56
2.3.3.3	Comparison and calibration against outputs from climate models	58
2.4	On calculating the sea-level contribution in marine ice-sheet models: implementation of a new approach for estimating the sea-level contribution from marine ice sheets	64
3	FOCUS ON THE INFLUENCE OF GLACIAL ISOSTATIC ADJUSTMENT ON THE LONG-TERM STABILITY OF THE ANTARCTIC ICE SHEET	73
3.1	Contrasting response of the West and East Antarctic ice sheets to Glacial Isostatic Adjustment	74
3.2	Influence of intra-regional variability in viscoelastic properties on Antarctic long-term stability	101
3.2.1	Introduction	101
3.2.2	Methods	101
3.2.3	Results	102
3.2.4	Discussion and conclusion	107
4	FOCUS ON THE ICE-SHEET INTERACTIONS WITH THE OCEAN AND THE ATMOSPHERE: <i>Projections of long-term future Antarctic ice loss with a historically-calibrated ice-sheet model</i>	111
4.1	Introduction	112
4.1.1	Ocean-driven current mass loss	112
4.1.2	An uncertain future in a warming climate	113
4.1.3	Modelling the Antarctic long-term future	114
4.2	Methods	115
4.2.1	Ice-sheet model and climate forcing	115
4.2.2	Ensemble design and calibration	116
4.3	Results	119
4.3.1	Historical trends and influence of the calibration	119
4.3.2	The pattern of future Antarctic mass loss	121
4.3.3	Drivers of mass loss	123

4.3.4	Evolution of Antarctic surface mass balance in a warming climate	126
4.3.5	The relative importance of atmospheric and oceanic drivers	128
4.4	Discussion	130
4.4.1	Evaluation of the calibrated projections	130
4.4.2	Comparison of reproduced SMB and surface runoff with outputs from climate models	131
4.4.3	The risk of shelf collapse and its influence	133
4.4.4	Climate models as the main contributor to the uncertainty	134
4.4.5	Limitations and uncertainty quantification	134
4.5	Conclusions	136
5	CONCLUSIONS AND OUTLOOK	143
5.1	Summary of the main results and general conclusion	143
5.1.1	The contribution of Antarctica to future sea-level rise	144
5.1.2	What have we learned about the interactions of the ice sheet with the Earth System?	145
5.2	Discussion and directions for future research	147
5.2.1	Improving the representation of ice–Earth system interactions	147
5.2.2	Towards credible sea-level projections	148
5.2.3	On the road to decadal (regional) predictability?	150
